Inaugural Address

1897.

Hon. CHARLES F. ADAMS, 2d, Mayor.

Mayor's Address.

Mr. President and Gentlemen of the Council:—

We meet to-day to take up the work of a new year, to review the past and consider the needs of the future.

This year two new schoolhouses have been built at a cost of \$75,000, two old ones furnished with new systems of heating and ventilation at a cost of \$9,000 and \$7,420 has been spent in new construction on various highways. For these purposes we have borrowed \$91,420. During the year \$49,980 of the city debt has been paid, and the city debt has thus increased \$41,440. The figures in more detail are as follows:

DEBT STATEMENT.

Jan. 1, 1896, Amt. City Debt.		\$264,895 61
Added during the year :		
Two schoolhouses	\$75,000	
Regrading Cross street	600	
Retaining wall, Willard street	520	
Heating Adams and Quincy schoolhouses	9,000	
Adams street	4,000	
Buckley street	1,300	
Newbury street	800	
Ryden street	200	
	<hr/>	91,420 00
		<hr/>
		356,315 61
Paid during the year,		49,980 00
		<hr/>
City debt. Dec. 31, 1896,		\$306,335 61

Falling due as follows :—

In 1897,	\$64,020 00	
1898,	58,280 00	
1899,	62,980 00	
1900,	54,300 00	
1901,	23,755 61	
1902,	9,000 00	
1903,	9,000 00	
1904,	9,000 00	
1905,	8,500 00	
1906,	7,500 00	
	<hr/>	306,335 61

WATER DEBT.

January 1, 1896,	\$725,000 00
Added during the year	18,000 00
Total,	\$743,000 00
Paid during the year	26,500 00
Debt Dec. 31, 1896	\$716,500 00

PLAYGROUNDS.

Dec. 31, 1895	\$48,000 00
Paid in 1896	1,000 00
Dec. 31, 1896,	\$47,000 00

SEWER DEBT.

\$1500 each year 1898 to 1900	4,500 00
\$2500 " " 1901 to 1905	12,500 00
\$1500 " " 1906 to 1937	48,000 00
	\$65,000 00

It will appear from this that \$64,020 or over 20 per cent. of our general debt falls due this year as against \$50,000 last. This is plainly far too great a burden for any year to bear, and we cannot fail to feel the result very seriously in an increased tax rate, a thing which we can ill afford to bear. There is nothing now to be done for this year, but we should avoid increasing the amount of debt falling due in 1898 and 1899 and

by other economies do what we can to relieve the pressure this year.

For current expenses we can raise either \$12 per \$1,000 of the total valuation of 1896, less abatements, or a like amount on the average valuation of the three preceding years. By the first method of limit, it is \$210,400; by the second \$206,900. Last year it was not easy to keep our expenses within the limit. Our current expenses this year must be very largely increased by the expense of maintaining the two new schools, and this year we are bound to recognize, before authorizing any increase in annual expenditures, that this limit compels, as our taxpayers demand, a policy of strictest economy. We must keep our expenses within our income even if we do not increase or improve the public service.

Our possible income is not likely to increase rapidly since valuations are already so high as to be at times beyond the actual value of the property, and we are faced with a very serious problem in adjusting our needs to our resources.

THE SEWER.

The chief work of construction to be undertaken during the year is the sewer. An advantageous contract with the city of Boston for the disposal of our sewage has been made; and the necessary plans and surveys are so far ready that this work of construction can begin with the opening of spring.

Money has already been appropriated for the main sewer from the centre of the city to the proposed pumping station. There is no reason why the force-main to Moon Island, the pumping station and possibly some lateral sewers should not be constructed during the year in addition to what has been pro-

vided for, and I feel sure the Council will agree that there is loss, not economy, in delay, and that all the money which can be economically used, ought to be appropriated when asked for by the Commission.

Recognizing the great importance of providing for surface drainage, careful study has been given to the possibility of using the sewer for that purpose. All who have studied the problem agree that it would be very expensive and wasteful to do so, and the plans which have been adopted are based upon the belief that surface drainage can be more economically provided for by improving our natural water-ways.

WATER DEPARTMENT.

During the year, 3.1 miles of water mains have been laid, and 301 new service connections made, thus adding possibly \$5,000 to the earning capacity of the plant. On the other hand the maintenance account has not been increased. The season has been such that our reservoir has furnished without difficulty the increased supply of water made necessary by the increased number of consumers. We are not, however, in a position to supply the city safely should a season of great drought occur before the Metropolitan Water System is complete, and the Commission, recognizing this, are now at work, and at the proper time will report a scheme for securing a temporary supply of water sufficient for the needs of the four years which may elapse before we can depend with certainty on water from the Metropolitan supply. It is plain that there is no system of economy short of refusing new takers that will alone provide for the needs of those years and I think it equally plain that we should buy water rather than stop putting in service connections and thus retard the growth of the city.

POLICE DEPARTMENT.

Our present force is adequate, and with our other needs, I cannot see my way to advising any increase in the expense of this department. I think it would be wise, however, to give one of the officers now on duty the title of Sergeant that there may be some authority in the absence of the Chief, and further to give the special liquor officer a title which will indicate the fact that a large part of his usefulness is in detecting thefts and recovering lost property. In justice, the men should have better quarters, and the city should have a more decent lock-up than the basement of the City Hall now provides.

CITY HALL.

The plans presented for the remodeling of the City Hall did not satisfactorily provide for this, as well as some other departments, and needed perfecting in detail. I believe, however that our future needs can best be provided for by alterations substantially in the lines of plans offered last year, yet I think we require a new fire station more than we do a new City Hall, and this should first receive attention.

WOODWARD FUND.

For some years the need and possibility of increasing the accomodations and usefulness of this school has been felt. Previous attempts had been made to secure plans for a satisfactory increase without too great expense. This year Messrs. Kendall & Stevens presented plans which gave excellent results at a cost, including all fittings and furniture, of about \$20,000. This the fund could afford without any danger that the income might fail

to be sufficient for the generous maintenance of the increased school, provided always that reasonable prudence of management is exercised. The additions have accordingly been made and the school is now substantially ready for occupancy.

HIGHWAYS.

With the limited sum available it is nearly impossible to make repairs in a permanent and satisfactory manner. Yet, during the year, material advance has been made in the condition of our streets, and what was given was well used. Better sidewalks are as requisite for the comfort of our citizens and the development of the city as improved streets, yet, while we borrow largely each year for new street construction and spend almost all of the annual appropriation of \$18,000 on the streets, we appropriate only \$1,000 annually for edgestones and sidewalks. It is doubtful whether we can afford not to do more in this line in the future. Any paving has been postponed till the sewer pipes are in the streets and they are in condition for permanent improvement. As nearly all recognize the wisdom and economy of paving both Hancock and Copeland streets as our means allow, there is here another argument for pushing forward the work of sewer construction.

The Highway department is hampered at present by the necessity of using in common with the poor department, a stable so miserable as to endanger the condition of horses and men, so small as to make economical purchases of grain or hay impossible, and so deficient in accommodation as to compel three departments to use one room for the cleaning and storage of their harness and tools. A new stable could be built for about \$3,000 and is among our needs, but the department will cheerfully con-

tinue in its present quarters till the city is in a condition to improve them.

SCHOOLS.

This department will require an increase of \$10,000 in their budget to meet the expenses of the two new schools. While I recognize that education is the first requisite to success, take pride in the belief our schools are among the best in the Commonwealth, and have no desire to stint in those things necessary for the best mental and physical development of the coming generation, yet I cannot but view with the gravest apprehension, a school budget of \$95,000, and I trust the School Committee realizing that other departments will be compelled to forego many matters of great need, will exercise the same rigid economy that other departments must practice in order to bring the expenses of the city within the iron limits of what we can legally raise for current expenses.

FIRE DEPARTMENT.

Next to education should come the protection of the property and the lives of our citizens. The success of this department in the last few years has been due to its Chief and the discipline of his men rather than to the adequacy of the means supplied. The apparatus is sufficient, but the system of call men and catch horses on which he must depend for getting much of that apparatus to fires, means failure in the primary requisite of speed and certainty. We are in need of permanent men and horses wherever we have apparatus, and having them, we could well dispense with many of the call men. We must not forget, however, that this means a cost of about \$4,000 annually. It would

further be in the interest of efficiency and safety to concentrate the men of apparatus of Wards Five and Six in a central station. The maintenance of this station with its necessary men and horses would amount to \$4,000 a year, and, if we add the cost of the men and horses proposed for Wards Two and Four, we find an expense of about \$6,000 a year, exclusive of the first cost of apparatus, horses and central station.

The Councilmen must prayerfully consider the financial condition of the city and the effect of the probable tax rate, and they must be satisfied that it is physically and legally possible to raise this sum annually in addition to the \$10,000 which must be added to the budget for school purposes, before they are justified in so far increasing our yearly expenses. Thoroughly believing in the policy of assuring safety from fire, and thoroughly sympathizing with the Chief's desire for more adequate means, yet I am not satisfied that these measures can safely be adopted today, and I believe we should wait till the budget has been prepared before taking any action.

IN CONCLUSION

Our future depends on our efforts in securing new residents and new industries. To attract the former we should do what lies in our power to hasten the promised improvements in track and motive power on the New Haven Road, and the consequent abolition of its grade crossings ; and to secure the shore reservation and boulevard which is now under consideration by the Metropolitan Park Commission. To attract the latter, the city government can offer neither subsidy, aid, nor attraction beyond that which the highest standard of honesty and honor in municipal government in itself lends.

We meet, gentlemen, to execute a trust of highest importance which has been reposed in us by our fellow-citizens. The first duty which a strict fidelity in the execution of that trust imposes, is to avoid recklessness and extravagance, and any tendency to use the public funds for the benefit of an individual, or of some locality at the expense of the general welfare. If we realize this and act accordingly, we shall not at least, have failed in our duty to ourselves, our city, and our government.

I pledge to you all aid that I or any executive officer can give, in the accomplishment of your task.

City Treasurer's Report

Report of Commissioner of Public Works.

To His Honor the Mayor of the City of Quincy.

SIR:—In compliance with the requirements of the city charter I herewith respectfully submit to you the eighth annual report of the Department of Public Works for the year ending December 31st, 1896.

A large amount of work has been done the past year by this department and, it is hoped, good results have been obtained. Besides attending to the regular work, forty-five special orders from the Council have been looked after. These make the total amount of appropriations expended under my direction \$149,270.37.

The Commissioner of Public Works ought not to be held responsible for the condition of public streets and property, but only for the wise and economical expenditure of money intrusted to him by the Council. During the past year it has been my constant aim to bring about the greatest possible results from the smallest expenditure of money, and to make all work of a permanent nature whenever possible. In the following report the items are in the order of the annual budget, but for a detailed statement of expenses I beg to refer you to the report of the Auditor.

I have made many suggestions and recommendations looking toward permanent improvements and for the purpose of bringing our city into line with other progressive municipalities in the vicinity of Boston. It is not to be expected that this can be accomplished in one year, but in ordering new work it is well to bear these things in mind and to have a system to follow.

BRIDGES, CULVERTS AND DRAINS.

It was found necessary early in the spring to replank Neponset bridge and an effort was made to reduce somewhat the expense of replanking every two years. This bridge had formerly been planked cross-wise the entire width with three inch plank. When it was found necessary to replank, about twelve feet in the centre only were worn through, while the sides showed only a very small amount of wear; but still we were obliged to replank the entire width. To change this condition of affairs and insure the longest possible service for each plank, it was decided to plank the twelve feet through the centre in a diagonal manner and six feet on each side lengthwise. The diagonal form of planking has been proved to withstand the traffic longer than any other form. The twelve feet ought to stand three years before renewing, while the longitudinal planking will have to be renewed only plank by plank as it wears through, varying from three years, near the centre, to ten years on the outside of the bridge. It is estimated that the saving to the city will be at least two hundred dollars per year by adopting this plan.

Beale Street bridge, over the tracks of the N. Y., N. H., and H. R. R., was replanked after the street railway tracks had been removed.

Calls were made for money which was forwarded to the Trustees of the Hingham and Weymouth bridges for repairs on those bridges, as the city is obliged to bear a portion of the cost of maintenance.

A large number of culverts were enlarged, repaired and rebuilt, but the limited appropriation would not permit as much

to be done in this line as was necessary. The Furnace brook culvert under Adams street, Sachem brook culvert under Farrington street, the Town brook culvert under Washington street and a culvert under Hancock street at Atlantic must be attended to the coming year.

The construction of a large number of surface-water drains to free our streets from water was contemplated; but the duty of cleaning out brooks, which was transferred from the Board of Health to this department, diverted about \$400.00 from this purpose. However 23 catch basins were built and 2,744 feet of sewer pipe laid in constructing drains in various parts of the city.

Surface drainage is one of the greatest factors in increasing the permanency of our street construction, and every dollar spent in this direction brings lasting results. One of our most eminent engineers, when asked what were the three most essential things for proper road construction, replied: "First, drainage; second, drainage; third, drainage." It is a well established fact that a road of poor material properly drained will last longer than a road constructed of good material without drainage.

There are several of our main streets that need better facilities for carrying off surface water, and it is to be hoped that liberal appropriations will be made each year for this purpose. The old unused water pipe, laid years ago for fire protection purposes from the Town brook to the City Hall Square, has been utilized to carry off surface water. Although the capacity of this pipe is not great enough, it shows to some extent the method necessary and the advantages of draining sections like this.

At the intersection of Newbury avenue and Billings street 4 catch basins have been constructed and pipes have been run into the old, unused reservoir. As it is constructed in sandy soil the reservoir takes care of a vast amount of surface water and thus reduces the volume of water that formerly ran down Sagamore street and often times washed out the roadway.

A paved water-break has been constructed and a ditch dug

at the junction of Faxon Park Road and Franklin street, thus intercepting the water from Penn's Hill and carrying it into the brook. This will relieve Independence square from the floods it was formerly subjected to. There are several land areas which in the near future must be considered in connection with the surface drainage problem.

	<hr/>	\$2,756 15

ENGINEERING.

The expense of engineering has been kept down a great deal by doing a large amount of work myself; but the time has arrived when it is for the best interests of the city to have a City Engineer. Grades should be established on all streets lines run out and proper bounds set, Assessors' plans made, designs and plans made for a system of surface drainage, and designs and plans made for a system of proper street construction, so that the Commissioner of Public Works may have a system to work upon and technical assistance. All this work in connection with the amount of engineering necessary in the extension of sewers and water-mains, would seem to demand that the office be created, but it may be wise to wait until the Sewer Commissioners have nearly completed their main intercepting sewers. Then the city will be in possession of a vast and valuable amount of data to work upon.

Expended	\$269 01	
Balance unexpended	30 99	
	<hr/>	\$300 00

REMOVAL OF SNOW.

An increased demand is made on this department each year owing to the fact that many new streets are opened up and settled upon. The people demand and seem to have a right to expect the city to break and plough out all streets whether accepted or not in order that children may go to school.

All the new streets in the Norfolk Downs district, formerly ploughed by the Land Company, are now attended to by the city, making an increased burden. Washington street and Sea street are subject to heavy drifts which can be handled only by shovelling. To reduce somewhat this heavy item of expense, plans have been made and snow fences are to be erected to prevent the drifts from forming in the street.

Sanding icy sidewalks is continued as usual for the safety and convenience of our citizens, although the state legislature of 1896 has enacted a law whereby the responsibility of keeping sidewalks and streets free from ice and snow no longer rests with cities and towns.

To give better service, the city is divided into seven snow-districts provided with nineteen ploughs. Each district is in charge of a competent man who is instructed to have his district ploughed out immediately after a storm and before the snow gets packed by travel.

On all principal streets the road machine is used to clear the gutters of snow drifts and level the snow in order to allow free flow for water in case of a sudden thaw or rain. Very few complaints are received, and so it is presumed that this system gives satisfaction.

Owing to the two very heavy storms in December the appropriation was exhausted and transfers were made by the Council.

					\$3,500 00

STREET LIGHTS.

Owing to the large number of new lights ordered by the Council the appropriation was made large enough to cover the expense of the same; but the Electric Light Co. declined to put them in until a contract was signed. The Council ordered a three-year contract, but the Electric Light Co. would not agree to a term of less than five years. After a long delay the Company finally agreed to and signed a three-year contract October 31, and immediately began erecting the lights ordered. This accounts for the delay in erecting lights and the large balance remaining.

Our street-lighting system cannot prove satisfactory while we have such a lax method of ordering and locating new lights. Usually they are asked for and the location named by a petition to the Council, and when granted they must be located where ordered. Thus we find lights located at irregular distances, and on some streets, a combination of arc, incandescent, oil and gas, that produces very unsatisfactory results.

No plan has been formulated, but I should suggest that a movement be made to adopt some one method of street lighting and to relocate the existing lights, at a more uniform distance apart.

At present we have contracted for the lighting of 95 arc, 274 incandescent, 68 gas, and 86 oil lights—a gain of 2 arc and 27 incandescent and a loss of 9 oil lights over December 31st. 1895.

ADVERTISING, PRINTING AND STATIONERY.

This appropriation is placed under the control of the Commissioner ; but the ordering of the supplies is done by the heads of the various departments while the Commissioner simply approves the bills. It does not seem right to hold the Commissioner responsible for the economical management of this appropriation, over which he has so little control, and therefore I suggest that the heads of each department include in their estimate of expenses each year the amount necessary for advertising, printing and stationary in their own department and that they be held individually responsible for the expenditure of the same.

Appropriated by Council	.	.		\$2,300 00
Expended	.	.	2,294 55	
Balance unexpended	.	.	5 45	
			—————	\$2,300 00

FOUNTAINS AND HYDRANTS.

These appropriations are simply for water used by fountains and hydrants and are paid directly to the Water Commissioners. This seems unnecessary now that the city owns its own water works.

I would suggests that these appropriations be made direct to the Water Commissioners thereby decreasing the number of accounts on the books of this department and also those of the Auditor and the Treasurer.

Appropriated for Fountains	.	.	\$200 00	
Appropriated for Hydrants	.	.	3,900 00

Expended	.	.		\$4,100 00

EDGESTONES AND SETTING.

(ABUTTERS PAYING ONE-HALF THE COST.)

This is an important account and more liberal appropriations should be made, as no one thing can add so much beauty or safety to our streets and sidewalks as edgestones. There is a growing desire among our property holders to place edgestones in front of their estates, but many applications had to be refused the past year owing to the appropriation becoming exhausted early in the summer. I had assumed that the whole appropriation of \$1,000.00 was for the one-half the city is obliged to pay and made plans accordingly; but I was afterwards informed that \$500.00 of this was reckoned as receipts and could not be used again. This obliged me to refuse many applications. Some bills, however, were paid out of the appropriation for highways and some were put over for next year.

As no special appropriation had been made for sidewalks and as the highway appropriation was not large enough to do much of this work, the sidewalks were somewhat neglected in the past year. Some of our business men have constructed brick and some concrete sidewalks in front of their property, the city assuming one-half the cost. Doubtless each year will see more of this work done.

The legislature having granted cities the right to construct and curb sidewalks wherever ordered by the Council and to levy one-half the cost upon abutting property owners, it would seem advisable that a liberal appropriation be made each year to be expended only when property owners make proper application, or when the Council deem it necessary.

Nearly all the cities in the State of the size of Quincy appropriate annually from five to twenty thousand dollars for sidewalks under the provisions of the above act, and it would seem a good policy for us to adopt their method: i. e., select certain streets radiating from the centre to outlying districts, construct a portion each year, relocate all telephone and electric light poles along the line as work progresses, and whenever trees interfere with proper construction and width cut them down and set out new ones on the curb line. Some of the

routes suggested would be Hancock, School and Franklin street to Independence Square on one side; Granite and Copeland street to West Quincy depot on one side; Hancock street to the High School on both sides; Adams street to Railroad bridge on one side; Washington street to South street on one side; Chestnut and Bigelow streets to Elm street on one side.

REPAIRS OF PUBLIC BUILDINGS, SCHOOLHOUSES AND CARE OF CITY HALL.

This work has taken a great deal of time and thoughtful attention the past year. From our 9 school buildings, 4 hose houses, Central Fire Station and City Hall the demands have been very great; but only the most necessary repairs could be made, while the others are postponed until the next year. Even with this postponement the appropriation was exhausted and a transfer had to be made.

It seems that the policy of the past has been to do as little as possible each year. Now many expensive repairs are crowded

upon us at once and cannot be longer postponed. The following is a list of some of the repairs that must be attended to the coming year. School buildings: painting outside of the Quincy, Wollaston, and Adams; painting sashes of the Willard, and John Hancock; new furnaces in the Willard, and Wollaston; repairs on steam-plants of the Lincoln and John Hancock and additional radiators; improving sanitary arrangements in the Coddington, and Washington; tinting walls and whitewashing in the Quincy, Wollaston, Coddington, and Adams; blackboards and minor repairs in all the schools.

Much work needs to be done on the Washington building, but it is so old and has been weakened by so many alterations and repairs that on the whole it would seem good judgment to replace it with a larger and more substantial structure.

The hose houses have had their share of attention, but much has been left undone. The house in Ward Five needs painting and shingling; that in Ward Six needs a new furnace, painting and roof repaired. The above, in connection with the many minor repairs, demand a much larger appropriation than ever before.

The City Hall is in a very bad condition and it seems false economy to spend any more money trying to fix it up. Few, or no repairs, have been made the past year in the expectation that the City Council would adopt some suitable plan for remodeling and enlargement to accommodate the various city offices which are now in outside quarters and also to provide better quarters for the Police department.

STREETS.

This is one of the most important and troublesome subjects that the city has to deal with and one in which every citizen is vitally interested. We have about 66 miles of accepted streets so situated that most of them not only have to bear the traffic of our own heavy teams, but of teams from all the towns south of us going to and coming from Boston, thus subjecting them to a greater amount of wear than the streets of cities of the size of Quincy are ordinarily liable to and thus increasing the cost of repairs.

The following table has been prepared from statistics taken from the Massachusetts Year Book and from the Massachusetts Highway Commission Report for the year 1895. It is sufficiently accurate to show the relative position Quincy holds in expenditures on highways in comparison with 28 other cities and towns of nearly the same population, valuation, or street mileage.

CITY OR TOWN	Valuation.	Population.	Tax Rate.	Miles Streets	Appropriation Roads and Bridges.	Amt. expnd yearly per \$1000 Val.	Expen'd per mile of St.

Average amount expended yearly per \$1,000 of Valuation	.	\$ 2 01
“ “ “ “ per mile of Streets	.	433 68

From this we see that while standing 20th, on the list in regard to amount expended per mile of street, we stand only 27th, in regard to expenditures per \$1,000 of valuation, and we are very much below the average in both cases. Other things being equal, it is fair to presume that the condition of our highways must hold the same position as our expenditures in comparison with the above named places.

To bring ourselves up to the average we must handle this problem as other cities do and that is by putting in some permanent street construction every year until all our main business streets are paved. The cost of repairs then will be very much reduced. There is not a city that can secure granite block pavements as cheap as Quincy can, and it is surprising that there is hardly a city in the state that does not have more of this class of pavement than we. Excepting granite paving blocks, there is a lack of road material suitable for road construction. Our crushed stone and gravel are of very poor quality, and considerable trouble is experienced in obtaining from private parties material suitable for our repairs. Gravel in the Wollaston district is of very good quality, but costs considerable to buy and handle, the West Quincy district furnishes very fair gravel, while in the Atlantic district it is almost impossible to obtain any at all. If the city could purchase a pit in each of these districts, it would undoubtedly prove a wise investment. A good ledge of trap rock has been located and samples are being tested which, if proven satisfactory, may make it advisable to put our portable crusher in condition and get out sufficient to make the wearing surface of our streets of trap rock and the foundation of stone from our present quarry.

During the year this department has handled 3,400 tons broken stone at a cost of 85 cents per ton for material, quarrying and crushing, also 3362 loads of granite chips taken from stone sheds free of cost, 1740 loads street scrapings and 8180 loads of gravel of which 3465 loads were bought at a cost of \$329.15 and 4715 loads obtained free from the city pit, cellars, and private pits. The work has been distributed all over the city as the most urgent needs demanded without reference to the

locality. Special attention was paid to keeping the gutters clear and clean, having the roads well crowned and filling ruts and depressions as rapidly as possible. A number of streets were resurfaced and rebuilt, some were filled and some cut down to make a more uniform grade, sidewalks were graveled, curbs straightened, gutter and street paving repaired, trees trimmed and 104 street signs erected. A steam drill was introduced at the quarry, producing very satisfactory results and lessening the cost of getting out broken stone.

Seventy-one permits were issued for opening streets, moving buildings, parades, occupying sidewalks etc.

A system of daily reports was inaugurated whereby a record is kept of the amount of labor and material and cost of same, performed on every street or public work in the city. Four new streets have been accepted of a total length of 3,463 feet, giving us a total street mileage of $65\frac{1}{2}$ miles containing 1,583,045 square yards. The cost for repairing is a trifle over 1 cent per square yard.

A large stone watering trough has been placed at the junction of Hancock and Squantum Streets and two stone street-crossings have been laid on Hancock Street and one on Washington Street.

All complaints have been investigated promptly and relief afforded where possible. Careful attention has been given to the condition of horses, carts, tools, etc. and everything is in first class condition except our quarters, to which I beg to call your attention. Our present stable is under the charge of the Poor department. Into this stable are crowded all the horses, cows, pigs, tools, carts and machinery belonging to the Board of Health, Highway, and Poor departments. There are no storage facilities for hay and grain except a supply for a week or ten days. One small room answers for shop, tool house, harness room and storage room for all three departments. This building is very much out of repair and it would cost in the vicinity of \$1,200 to put it into shape and to enlarge for present needs. Therefore I consider it wise to erect a new stable and set off a portion of the Poor farm, containing the

gravel pit, for the exclusive use of the Highway department. This would improve the health of our horses, enable us to purchase grain in a more economical manner, improve the efficiency of the department and provide ample quarters for many years, even if the sewer work is added. This needed improvement has been asked for by every Commissioner since 1889, and I trust will be considered the coming year.

As it is quite likely the Quincy and Boston Street Railway Company will soon locate their tracks in the centre of Hancock Street, I desire to call attention to the fact that this street ought to be rebuilt at the same time, using a more permanent form of construction, and also widened at the bridge over the N. Y., N. H., & H. R. R. As the presence of street railway tracks in our streets very much increases the cost of maintenance, it seems but right that the city should be reimbursed in some manner for this increased cost.

Many cities recognizing this fact are compelling street railway companies to compensate them in some form or other for the additional burden the city bears on account of the tracks. Some companies water the street upon which they operate cars: others assume a certain portion of the cost of maintenance and also cart away all snow; while in many cities, particularly in the western states, franchises are sold to the highest bidder, for a term of years.

Usually upon streets with moderate traffic and a thirty-foot roadway, so that the wear is about evenly distributed over the entire surface, the cost of maintenance rarely exceeds two cents per square yard; but if a car track is put in the centre, the traffic is confined to a narrow space on each side and as the wheels of vehicles constantly travel in the same place, the cost of maintenance is fully three times as great.

Mr. W. L. Dickinson, Superintendent of Streets of Springfield, in a paper read before the Highway Association gives some figures on this subject which are interesting and would probably apply to every city in the state. Taking the actual cost of maintenance of thirteen macadamized streets in the City of Springfield, covering a period of fourteen years, he says the

average annual cost of maintenance per square yard is increased from \$.013 with no car track in the centre to \$.063 with a car track in the centre.

He further says that these results are obtained by the use of Westfield and Meriden trap rock which is as good material as can be found in the country. Undoubtedly with poorer material the average annual cost would be greatly increased. In view of these facts it behooves us to consider carefully this subject.

The cost of maintaining a macadam surface is very great on Hancock, School, Franklin and Copeland Streets, and I trust measures will be taken toward paving these streets with granite blocks, as I believe it the most economical thing to do.

In the following statement, the items of receipts are simply reimbursements from the Street Railway Company and other city departments for expenditures made on their account and taken from the regular appropriation.

WATERING STREETS.

This work was let by contract the past year to six different parties, and although the results were not as satisfactory as desired, still a saving was made of nearly \$100 per month to the city.

It is very difficult to satisfy all parties with street watering and we cannot expect to do so. The abutters on a street watered, paying one-half the cost, feel that the street should be watered copiously to lay every particle of dust, while bicycle riders and the travelling public do not like any mud, and the city for its part does not want the streets softened up and disintegrated by excessive sprinkling. Our routes are so long that a cart can cover its district but twice or three times a day which necessitates excessive sprinkling. Increasing the number of carts and shortening the routes, so that a district could be covered four times a day, would produce much better results and save the streets considerably.

Petitions are received each year to extend the street watering system; but it must be borne in mind, if additional streets are ordered sprinkled next year that it will be necessary to purchase another cart.

The past year seven carts were used to sprinkle eleven miles or 209,500 square yards of street surface at an annual average cost, including cost of water, of \$363.27 per mile or \$.019 per square yard.

Assessments were made according to the valuation of abutting estates at a rate of 60 cents per \$1,000 of valuation. This seems a just and equitable plan. Very few abatements were asked for.

SPECIAL APPROPRIATIONS.

As Buckley Street was in a very unsafe condition and subject to frequent washouts, the Council in September appropriated \$1300 for specific repairs. Curbing was laid on both sides, four foot paved gutters constructed, and sidewalks and street put in good condition.

Newbury Avenue and Squantum Streets received an appropriation of \$800 from the Council on August 10th. In this case the grade was changed, the hill cut down $2\frac{1}{2}$ feet, and the low place at Teal Pond raised three feet. A timber culvert was put in, crossing laid, corner stones put in and fences built and repaired on both sides.

Willard Street wall was built by order of the Council in August, \$520 being appropriated for that purpose. The contract was let to the lowest bidder, Mr. W. T. Shea for \$475. After the wall was built the street was widened and a suitable fence and sidewalk constructed.

Copeland Street near Furnace brook was raised by a Council order of 1895 for \$300. This needed improvement was made this year and the raised grade allows all street water to flow directly into the brook, thus doing away with a disagreeable mud hole.

Cross Street, between Crescent and Common Streets, had no drainage whatever, and water lodged on the street often to a depth of 18 inches. The Council on June 1st, appropriated \$600 to drain this place. By permission of Mr. Albert Shackley a 12 inch pipe was laid through his land to Furnace Brook. The street was then graded so that all surface water would flow into a catch basin opening into this pipe. Street lines were straightened, retaining walls and fences built, curbing laid and the intersection with Common Street greatly improved. The results seem very satisfactory for the small amount expended.

Ryden Street was petitioned for in September. On November 10th, the Council accepted it as a city way and appropriated \$200 for grading. This sum was expended in making a 20-foot roadway the entire length (416 ft.) and in constructing a pipe culvert which gives the relief needed by residents in that locality.

Adams Street between Whitwell Street and Furnace Brook was ordered widened and regraded by the Council on July 20, and \$4000 was appropriated for that purpose. After very careful planning to get the greatest results for the money, it was decided to adopt a Telford-Macadam construction. The street was laid out 45 feet wide with 28 foot roadway and $8\frac{1}{2}$ foot sidewalks for 2200 feet. The sidewalk was constructed only on one side, that being deemed sufficient at this time. Two hills were cut down and low places raised, making a very uniform and light grade. A 6-inch drain to intercept ground water was laid on the upper side a distance of 1,700 feet in a trench 3 feet deep and filled to the sub-grade with broken granite or grout. The sub-grade was shaped and rolled to the same shape as the finished grade upon which was laid by hand large wedge shaped stones for a width of 22 feet, not less than 8 inches in depth in the centre and 6 inches on the outside. The spaces were thoroughly filled by wedge shaped stones driven by a sledge and afterwards rolled by our 20-ton steam roller. Upon this foundation was laid 6 inches of broken stone from the crusher, put on in three layers, each layer being thoroughly compacted and watered. The last layer was stone screenings which made the binder. The crown was made $\frac{3}{4}$ of an inch to a foot, two 12-inch pipe culverts under the street and six 5-inch drains across the sidewalk were constructed. Also 320 feet of new guard rail were put up and all old fences, walls and poles put in proper shape. The foundation stone was bought by the load at a low figure and cost laid in place and rolled 20 cents per square yard. The entire cost was 61 cents per square yard of road surface, not including the square yards of sidewalks.

The heating and ventilation of the Adams and Quincy

Schools were taken up by the Council, plans adopted and \$9000 appropriated early in August. The contract for mason work and apparatus for the Adams School was let to the Fuller & Warren Warming and Ventilating Company. The carpenter and painting work were performed by day labor. The work was pushed rapidly and was completed so that the school opened on the first day of the fall term. Beside the heating and ventilating system a system of cremating closets was put in the basement thus doing away with objectionable outbuildings. The total cost for this school was \$5,787.20.

The heating of the Quincy School was let to Messrs. Lynch & Woodward who installed a two-boiler steam plant. The Fuller & Warren cremating closets were located in the basement. The total cost for this school was \$3,200.15. The systems in both schools are working finely and are a very great improvement over the old arrangements from a sanitary point of view.

The Coddington School was improved by putting in additional windows to make the school-rooms much lighter. This expense was borne by a special transfer of \$343.80 made by the Council July 6.

Two nine-room brick schoolhouses were ordered by the Council on March 30th, according to the plans made by S. O. Moxon, and \$75,000 was appropriated for that purpose. After keen competition the contract for both buildings was awarded to Mr. George Howard of Brockton, he being the lowest and also one of the most responsible bidders.

On the Massachusetts Fields School the building contract price was \$24,256.00, which did not include mason or carpenter work for the heating or sanitary systems. The heating contract was awarded to the Walworth Construction and Supply Company of Boston for \$3,061.00 exclusive of mason work. The contract for cremating closets was awarded to the Fuller & Warren Warming and Ventilating Company of Boston for \$648.00, exclusive of carpenter and mason work, and the curbing and grading was done by day labor by the city force. This

building and grounds were completed November 23, and turned over to and accepted by the School Board.

On the Gridley Bryant School the building contract was \$26,600.00, which did not include the carpenter or mason work for the heating and sanitary systems. The heating contract was awarded to Messrs. Lynch & Woodward of Boston for \$3,100.00, the contract for cremating closets to Fuller & Warren for \$648.00, and the curbing and grading by the city force. The building will be ready for occupancy early in January. This delay was occasioned by the large amount of ledge encountered in excavating.

The contract for school desks for both buildings was awarded to the Springfield Furniture Company of Springfield, Illinois, for \$2,278.20, who furnished adjustable desks and chairs. The other school furniture and most of the furnishings were purchased from our local dealers.

All the contractors have performed their work in a very creditable manner, and the city is to be congratulated upon securing such large, well arranged and modern school buildings at so moderate a cost. The accounts have not been settled sufficiently to enable me to present a detailed statement of cost at the present time.

In concluding this review of my first year's work as Commissioner of Public Works, I desire to acknowledge my indebtedness to His Honor, the Mayor, for the constant, active interest he has taken in this department, and for his valuable advice and encouragement, to the several members of the City Council for their uniform courtesy and consideration; and to the heads of the different departments for their ready co-operation. I desire also to acknowledge my appreciation of the faithful and conscientious assistance rendered me by my foreman, clerk and employees during the year.

Respectfully submitted,

CHARLES F. KNOWLTON,

Commissioner of Public Works.

Report of the Assessors.

To His Honor the Mayor of the City of Quincy:

The Board of Assessors herewith submit their annual report. We have assessed upon the polls and estates of the City of Quincy for the year 1896 the following sums:

City tax levy voted by the City Council	\$202,500 00	
City tax notes maturing during the year	77,480 00	
City tax, interest to be paid during the year	20,342 65	
County tax, (less polls 5856,)	6,222 97	
State tax, (less polls 5856)	5,921 50

Collector.

Report of Park Commissioners.

To His Honor the Mayor of the City of Quincy:

The Board of Park Commissioners respectfully submit the following report :

The sum of \$500 was appropriated for the use of this Commission and \$267.98 has been expended, leaving a balance of \$232.02 which, with \$113 received from rent of pasture and other sources, has been returned to the City Treasury.

This appropriation does not allow of any extensive improvements being made, and is devoted to the care of the different grounds and the building and repairing of fences and backstops. We believe the members of the ball clubs in the different sections of the city should take more interest in the maintenance of these back stops, and not make it an annual duty for this Commission to build new ones.

At Merry Mount Park the curbing around the spring has been lowered to allow of easy access and other improvements made to do away with the formerly artificial appearance. The Board regrets that it is found necessary to have the sewer enter the Park, and that a suitable location for the pumping station cannot be found in some other section of the city. However,

the proposed location is outside of the Park limits, and as any change would involve the expenditure of a large sum of money on the part of the city, it was decided, after consulting the Hon. Charles Francis Adams, the donor of the Park, to raise no objections to the project.

At Faxon Park the underbrush should be cut the coming summer, as it can be done then more effectively; but what is needed here is a good road to allow the public to reach the Park, and some action should be taken by the proper authorities to provide one.

Skating facilities have been provided at the Ward 4 Playground by cutting the brush on the lowlands along the brook.

At the Ward 3 Playground some system of drainage should be devised to place the grounds in good condition and we believe that a great improvement could be made by widening and deepening the brook.

The Third Hill Reservation has been taken by the Metropolitan Water Board, the City Council assenting by passing the following Resolution November 2nd, 1896.

RESOLVED: That it is the sense of the Council that the Commonwealth of Massachusetts take so much of the land on Forbes' Hill, belonging to the City of Quincy, as is designated on plan of the Metropolitan Water Works Southern High Service, dated April 1896, for the purpose of constructing a reservoir and stand-pipe thereon, provided that in consideration thereof, the Commonwealth pays to said City of Quincy the sum of \$4,000 and allows the citizens of Quincy full access to the land for purpose of recreation so far as practicable, and that the City of Quincy be admitted to the Metropolitan Water District for a nominal consideration."

As the money expended in purchasing this land was part of an amount appropriated for the purchase of Playgrounds, it would seem proper that the \$4,000 received from the Commonwealth be expended for more land for recreative purposes.

Report of Managers of Public Burial Places.

To His Honor the Mayor of the City of Quincy :

There never was a time when the cemeteries of the city have looked as well as they have this year. This, of course, is directly due to the care given by our Superintendent, and his work has stimulated those caring for their own lots, to give more and better attention. The custom of ordering lots cared for has been improved upon and to the great satisfaction of the Board we can say that no lot has received care this year unless the owners have signed a contract with the city, so that there will remain no bill of 1896 that can not be collected. This system of doing work in the cemeteries, only where a written order is given, should be extended during the coming year to everything in the department. There will then be no bad bills and the income will be greatly increased. It is with much gratification that we refer to the income of the department as will be noticed in the appended financial statement. It is certainly a pleasure to say that the income has for the first time been greater than the expenses.

CARE OF LOTS.

In most all large cemeteries the cost for the care of lots is considerable, but the rules of those cemeteries are such that every lot must be kept in good condition. The price for care of

lots charged by the city of Quincy is small and there seems no good reason why owners should not be obliged to take advantage of the city's terms. We can never have a pretty cemetery until every lot is under the care of the department. The price of \$3 per single and \$2 for each additional lot, includes mowing the grass with lawn mowers, watering as often as may be necessary and, in fact, any minor matters that will make the lot look satisfactory to all concerned. There is no need of the owner doing one thing to their lot if they contract for its care by the department. By this we do not mean that if your lot has not been cared for for several years and is now covered with moss that the city will sod it or sow it with grass seed. If your lot is given to us in fair condition, we will make it look much better. Some owners think they are practising economy by letting their lots go without being dressed. It is a well known fact that we cannot continually drain upon the natural richness of the earth without soon impoverishing it. Nature must be aided and at the proper time. Great care has been taken to secure good dressing for the lots and more money is spent now for this material in one year than was formerly in several years. The cost for dressing a lot is \$1 and this price hardly covers the actual expense. The lots are dressed late in the fall and when the spring opens the ground is saturated with nourishment and the grass takes an early start and grows vigorously even during the burning hot weather of summer. It has something to feed upon and keep it in a healthy condition. It is this one neglect that makes some of the lots cared for look below the standard. It is only a matter of time, however, that owners will see it to their advantage to pay this slight expense for dressing each year.

The Board is of the unanimous opinion that no lot should be cared for in the future unless the owner will agree to first put it in proper condition. This will stop nearly all complaints of poor care, for it is invariably the case where fault is found, that the lot has been placed under our care after having been neglected for many years and, consequently the soil is worn out and the grass nearly all dead. These complaints prevent other

owners from placing their lots under the care of the city and hence, works an added injury to the cemetery. Under the heading of "Statistics," will be found the number of lots cared for during the season of 1896.

Owners of lots in the oldest section of the cemetery do not, as a rule, give much attention to their lots except at Memorial Day. This is easily explained from the fact that the old custom of caring for cemetery lots in all country places, and it is held the same today, was to place flowers upon the graves at certain intervals and the scythe was used upon the grass about once during the season. The city of Quincy has grown out of that custom and the call is for a cemetery that will not be a constant reminder of the sadness of death, but shall be as cheerful, attractive and beautiful as the landscape gardner can make it. We ask the co-operation of the lot owners in that part of the cemetery to assist us in making improvements.

THE LAWN SYSTEM.

The lawn system of connecting lots has been extended this season and has greatly improved parts of the cemetery. This system has met with much favor and the Board is repeatedly asked to extend it to other sections of the cemetery. The small amount of money which we have, makes it impossible to comply with all the requests, but each year, by doing a section, the whole cemetery will finally be laid out on this plan. Lot owners should make their requests early in the season so that provision may be made to have the work done at the proper time. It is the object of the Board to have all the lots level, for, how unsightly it is to see lots of various elevations and shapes, some covered with a few stray tufts of grass and others with moss and weeds, only to become brown and almost bare as the hot summer sun strikes down upon them. It is impossible to keep lots raised above the regular grade, in good condition. They soon become dry and parched by the sun and to be kept looking good, should have a fountain placed so as to continually keep them sprinkled.

IMPROVEMENTS.

About 1,200 feet of water pipe was laid this season and now nearly all sections of the cemetery may be easily reached for sprinkling with the hose.

New wooden steps were placed upon the lot to reach the Soldiers' Monument, to replace the old ones, which had become decayed and unsafe.

The surroundings of the Superintendent's office were greatly improved by a small ornamental plot placed in front of it and by the general repairs of the sanitary at the left. Further improvements are contemplated the coming season.

The employment of help in this department is placed entirely in the hands of the Superintendent and he employs only such men as are desirous and anxious to work. Our appropriation is small and the duty we owe to the citizens is to secure the most that we can for the money. Being a public burial place, no discrimination can be made in hiring labor, and the rule has been to keep during the whole season those men who show a willingness to render to the city full value for the wages they receive. Neither race, creed or politics enter into the employment of the men. The one requirement is that they shall be citizens and residents of Quincy.

The need of a chapel and Superintendent's residence was never more apparent than on Memorial Day. Many people were in the cemetery when the rain descended in torrents and they were compelled to seek shelter where they could find it. The city should make some move in this direction in the immediate future. The income to be derived, would pay the interest upon the investment, if suitable greenhouses were erected in addition.

The unsightly white stakes placed in the single grave plots have been partially done away with. In Plot L terra-cotta grave markers have been used and it is the intention to level the graves in this section so that the plot will appear more as a lawn. It will then receive perpetual care and will greatly improve the appearance of the cemetery. The remaining plots will be done in like manner.

The expense of building walls around the pond was too great to be undertaken this year as other improvements demanded immediate attention. The coming season this work should be done on such parts as can prudently be undertaken with the funds at our disposal.

The Board would recommend that the restriction upon the sale and transfer of lots, as provided for in the city ordinance, should be abolished and the entire matter left in the hands of the Board of Managers. The main reason for this, is that it is inoperative at present and does not accomplish the desired end. The purpose for this restriction has long since ceased and it now works only as a very disagreeable injury to those old Quincy families, who have become residents of other places and have received deeds of lots from deceased relatives and are unable to have them transferred to their names. We have also found that non-residents have been able to secure lots in spite of this clause and as the advanced price in lots is the best preventative against having the poor of other cities and towns make a raid upon our cemetery, there remains no good reason for working an injustice to former Quincy residents.

STATISTICS.

Whole No. of lots contracted for care 316

There have been 192 burials and 5 removal in Cemeteries during the year 1896, as follows :

Report of City Physician.

To His Honor, the Mayor of the City of Quincy:

The following report of the City Physician is respectfully submitted.

The general health of the inmates of the almshouse has been good throughout the year. In the early part of the year there were four deaths of patients suffering from chronic diseases.

To the poor of the house, thirty-one visits were made.

To the outside poor, one hundred and fifty-three.

To the police department, eight.

To the office, including vaccinations, one hundred and twenty-eight.

JOHN F. WELCH, M. D.

City Physician.

Health Department.

To His Honor the Mayor of the City of Quincy:

The Board of Health, respectfully present their annual report for the year ending Dec. 31st, 1897.

The organization of the Board was made early in February by electing Benjamin F. Curtis, chairman and Dr. J. H. Ash, secretary.

Mr. Timothy F. Ford was appointed Inspector.

We are pleased to report that during the last year the general health of the city has been very good, no serious epidemic of contagious disease prevailing, nearly all the cases that have occurred, being of a mild type, yielding readily to medical treatment. The danger from diphtheria, that dreaded disease, has now by the use of anti-toxine been greatly lessened, and the death rate lowered. We have had 106 cases the last year and 10 deaths against 105 cases in 1895 and 16 deaths.

Another year's trial of the "Odorless Excavating Company's" system for scavenging the city has proved beyond doubt that this important and disagreeable work has been performed to the entire satisfaction of the Board, and citizens also. Rigid rules and restrictions have been imposed on all who carry garbage, swill, etc., through the streets of our city, and we think that this business has been very much improved since the Board have taken it in hand—Licenses are only granted to those who comply fully with the restrictions imposed, and in

case of violation, prosecution and revocation of licenses at once follow.

The Board unanimously recommend that a more efficient service for the collection of the garbage of the city be maintained. At present, we have only one team permanently employed; one team three days weekly, and a service of two days weekly from June 15th to Sept. 15th at Hough's Neck and Rock Island.

We strongly recommend that three teams be employed permanently making it possible to make two collections weekly from all parts of the city, and three collections weekly from the central populous part. By so doing it will be of great benefit to all, and the cleanliness and health of the city much improved.

Personal visits and inspections of all the public buildings, schoolhouses, etc., have been made by the members and defects and nuisances been remedied.

In the early summer petitions were received in regard to an alleged nuisance at Teal Pond, Atlantic and at Hough's Neck.

Personal visits were made by the members and the complaints carefully considered. The Board were not able to suggest any practicable remedy to abate the evils complained of, and were unanimously of the opinion that the alleged nuisances was not of such serious character as to warrant the adoption of unusual proceedings.

The inspector of cattle has under our directions maintained a careful supervision of all dealers in fish, vegetables and provisions. A number of seizures of products unfit for food have been made, but so far no wilful exposure of decayed fish, vegetables or provisions have been discovered; therefore no prosecutions have been authorized.

We are satisfied that by means of weekly inspections that our citizens have been the gainers, and that the quality of food products offered for sale much improved.

A list of the deaths and contagious disease cases will be found below :

We append to this the reports of the Inspector of the Board, Inspector of Cattle and Inspector of Plumb-
ing.

BENJ. F. CURTIS, Chairman,
JOHN H. ASH, M. D.
JOHN A. McDONNELL.

Board of Health.

REPORT OF INSPECTOR.

GENTLEMEN :—I beg leave to submit my annual report for the year ending Dec. 31, 1896.

During the year the following nuisances were discovered and notices to abate the same was served :

Offensive vaults	494
Offensive cesspools	201
Defective sink drains	41
Untrapped waste pipes	23
Sewage flowing on surface	22
Filthy yards	6
Defective vaults	7
Sewage flowing into cellars	7
Offensive piggeries	3
Sewage flowing into brook	3
Wet cellar	2
Dead animals	2
Vault too near brook	1

While the number of nuisances reported may appear large, the owners of premises complained of in almost every case manifested a willingness to comply with the orders of the Board and I can say that the sanitary condition of the city is much improved over that of last year.

During the year I have made seven complaints to the Court of violations of the rules and regulations of the Board and the offenders were fined.

One hundred and eighty cases of diphtheria, scarlet fever and membranous croup have been reported by attending physicians during the year. The rooms occupied by the patients have been in almost every case, fumigated by your Inspector. Occasionally the work has been done by the householder under the directions of the physicians.

Respectfully,

TIMOTHY F. FORD, Health Inspector.

REPORT OF INSPECTOR OF PLUMBING.

QUINCY Mass, Dec. 31, 1896.

B. F. Cutris, Esq., Chairman Board of Health.

DEAR SIR:—I herewith tender my third annual report as Inspector of plumbing of the city of Quincy. The work attended to during the past year, has been as follows:

No. new houses inspected	93
“ “ stores “	9
“ old houses “	3
“ stores “	2
“ new school-houses “	3
“ Additions to schoolhouses “	1
“ new churches “	1
Alterations	32
<hr/>	
Total	134

Representing an aggregate (estimated) value of Twenty Thousand Dollars.

There have been two arrests made during the year for “Violation of the City Ordinances, regulating Plumbing,” on one of which a fine of ten dollars was imposed by the court, and the other placed on file with the approval of the Board of Health.

In view of the fact, that the starting of the Public Sewer is an absolute certainty during the coming year, I would recommend that the Board purchase and maintain a Smoke Test Apparatus, cost not to exceed thirty-five dollars, by means of which each and every householder could be satisfied, beyond a possibility of doubt, regarding the condition of the plumbing contained in his or her premises.

Respectfully submitted,

J. J. KENILEY, Inspector of Plumbing.

Inspector of Animals and Provisions.

To His Honor the Mayor of the City of Quincy :

I beg leave to submit the following report for the year ending December 31, 1896.

The intent of the law creating this office is to promote the public health by preventing the sale of diseased or unwholesome meat or fish, rotten or decaying fruit or vegetables, and also the suppression of contagious diseases among animals within this city:

According to Chapter 491, Acts 1894 it is the duty of any person knowing or having reason to suspect the existence of a contagious disease among any domestic animals within this city to notify the Board of Health or Inspector that they may notify the State Board of Cattle Commissioners who immediately send the State Inspector to take charge of the case.

In accordance with a vote passed by the Board of Health May 11, I was directed to inspect all stores where food stuffs were offered for sale, at least once in two weeks. This I have done and believing it for the best interest of the public health, I have visited them much oftener during the warm weather. I have also inspected daily the loads of peddlers who come to this city to sell meat or provisions. During the year I have seized and disposed of otherwise than for food, 301½ pounds of meat, 400 mackerel, ½ barrel of fruit and vegetables.

October 1, I was directed by the State Cattle Commissioners to inspect all cattle, sheep and swine within the city, also the stables where cattle are kept and to report the sanitary condition of the latter to the State Cattle Commissioners. This work is not yet finished. I have reported four suspicious cases as tuberculosis, two of which have been destroyed.

During the year four cases of glanders occurred and the animals were killed.

Many of the stables where cattle are kept in this city are filthy and poorly ventilated and the attention of the Board of Health as well as the Cattle Commissioners has been called to them.

The following is a report of inspections:—Cows, 408 ; swine, 336 ; calves, 23 ; bulls, 5 ; oxen, 4 ; sheep, 1 ; stables, 121.

Respectfully submitted,

TIMOTHY F. FORD,

Inspector of Animals and Provisions.

Milk Inspector.

QUINCY, January 1, 1897.

To His Honor the Mayor of the City of Quincy:

DEAR SIR; I beg leave to submit the following report for the year ending December 31, 1896.

Forty-three licenses have been issued for the sale of milk. Thirteen persons have registered as dealers in milk. One person has registered as a dealer in butterine.

I have returned to the City Treasurer \$28.50, the total receipts of this office.

Very few complaints have reached this office, of the quality of the milk delivered in this city, and the samples which I have tested lead me to believe that our citizens are now well served in this particular.

Since the establishment of this office by the City Council, 104 different persons or firms have registered as dealers in milk.

I wish to call *special* attention of all owners of cows to Section 3, of Ordinance No. 21.

Section 3. Every person who conveys milk in carriages or otherwise, for the purpose of selling the same in the city, shall annually in the month of May, be licensed by the Inspector in accordance with the provisions and subject to the penalties of the Public Statutes, to sell milk within the limits of the city and shall pay to the Inspector fifty cents to the use of the city.

Every person who sells milk, or offers it for sale in any store, booth, stand, or market place in the city, shall register in the

books of the Inspector and shall pay to him fifty cents to the use of the city. The Inspector shall pay over monthly to the City Treasurer all sums collected by him.

I also wish to call attention of all milk dealers to the legal standard of milk and refer them to Sections 1 and 2 of Chapter 398 of the Acts of 1896.

[CHAP. 398.]

AN ACT RELATIVE TO THE INSPECTION AND STANDARD OF MILK.

Be it enacted, etc., as follows :

SECTION 1. Section seven of Chapter fifty-seven of the Public Statutes, as amended by Section seven of Chapter three-hundred and fifty-two of the Acts of the year eighteen hundred and eighty-five, is hereby amended by striking out all of said section, and inserting in place thereof the following :—*Section 7.* No person, by himself or his agents, shall sell, exchange or deliver, or have in his custody or possession, with intent to sell, exchange or deliver, milk from which the cream or any part thereof has been removed, unless in a conspicuous place upon every vessel, can or package of more than two quarts capacity from or in which such milk is sold, exchanged or delivered, the words “Skimmed Milk,” are distinctly marked in plain uncondensed gothic letters not less than one inch in length, said marking to be in dark letters on a light ground, and to be on the vessel, can or package itself and not upon a detachable label or tag; and unless in a conspicuous place upon every vessel, can or package of two quarts or less capacity from or in which such milk is sold, exchanged or delivered, the words “Skimmed Milk,” are distinctly marked in plain uncondensed gothic letters, said marking to be in dark letters on a light ground, and to be either on the vessel, can or package itself or upon a detachable label or tag. Whoever violates the provisions of this section shall be punished by the penalties provided in Section five.

SECTION 2. Section nine of Chapter fifty-seven of the Public Statutes, as amended by Section six of Chapter three hun-

dred and fifty-two of the Acts of the year eighteen hundred and eighty-five, and by Section two of Chapter three hundred and eighteen of the Acts of the year eighteen hundred and eighty-six, is hereby amended by striking out all of said section, and inserting in place thereof the following:—*Section 9.* In all prosecutions under this Chapter, if the milk is shown upon analysis to contain less than thirteen per cent. of milk solids or, to contain less than nine and three-tenths per cent. of milk solids exclusive of fat, or to contain less than three and seven-tenths per cent. of fat, it shall be deemed for the purposes of this act to be not of good standard quality, except during the months of April, May, June, July and August, when milk containing less than twelve per cent. of milk solids, or less than nine per cent. of milk solids exclusive of fat, or less than three per cent. of fat, shall be deemed to be not of good standard quality.

SECTION 3. Section four of Chapter three hundred and eighteen of the acts of the year eighteen hundred and eighty-six is hereby amended by striking out all of said section, and inserting in place thereof the following:—*Section 4.* Whoever makes, causes to be made, uses or has in his possession any imitation or counterfeit of any seal used by any inspector of milk, collector of samples or other official engaged in the inspection of milk, and whoever changes or in any way tampers with any sample taken or sealed as provided in section two, shall be punished by a fine of not less than one hundred dollars and by imprisonment in the house of correction not less than three nor more than six months—[*Approved May 15, 1896.*

Respectfully,

HENRY C. HALLOWELL, M. D.,

Inspector of Milk.

Report of Overseer of the Poor.

To His Honor the Mayor of the City of Quincy.

I have the honor to report :

The appropriation for the year 1896 was \$9,000. The amount expended on Dec. 31, 1896, was \$8,525.46 an itemized account of which is hereto appended which gives very nearly the standing of the department, there being but few outstanding bills.

The amount for Hospital Aid has been small on account of bills to the State not having been paid as promptly as we could have desired. There are now bills of considerable amount against the State which will no doubt soon be paid, but as the amount received from this source is immediately paid to the Hospital it does not materially effect the actual expense of this department, other than showing a fictitious expense.

The management of the Almshouse has continued under Mr. and Mrs. Franklin Jacobs very satisfactory, and I have found Mr. Jacobs, with his years of experience, to have been an efficient official and a valuable assistant.

The collections for this department during the year have been \$1,135.57, thereby reducing the net expense by that amount. The repairs on the Almshouse buildings have been of a minor nature and are included in the Miscellaneous expense account, but more extensive repairs will be needed during the coming year. In this connection I will say that I concur in the recommendations of my predecessor in regard to much needed improvements in the sanitary arrangements of the Almshouse. As is well known, most of our inmates are old and many are feeble, and although in years gone by it was considered "good enough" yet in consideration of the fact that this as well as every other city and town, endeavors to have its public buildings of the most approved pattern for the purpose designed, it does not seem to be an unwarranted expense but simply an act of humanity in behalf of our unfortunate poor to have an additional bath-room and water closet, and thereby comply fully and fairly with the requirements of the State law.

During the year the old 1½ inch water service supply pipe has been replaced by a new 6-inch pipe running to a hydrant favorably located for use in case of fire. The supply pipe for the service of the street department and the Board of Health have been replaced and carried to their respective buildings in trenches, thus avoiding danger from frost, as was the case previously, the pipes in places having been exposed to the open air.

The accommodations of the stable and outbuildings would be ample for the use of this department were it not for the fact that the Street and Health departments, who are now located there, having gained their foothold during the past years by "Squatter Sovereignty", and a constantly increasing demand for "more room", and whose demands have been repeatedly granted until now it seems necessary for this department to assert its rights and insist that the privileges to be allowed, be clearly defined. But unless some such plan as the one suggested by His Honor the Mayor in regard to the erection of a new City Stable is carried out, it would seem useless to look for much improvement in this direction.

Respectfully submitted,

E. W. H. BASS,

Overseer of the Poor.

Police Department.

To His Honor the Mayor of the City of Quincy.

Sir—In compliance with the ordinance governing the Police Department, I have the honor to submit this, the eighth annual report of the department for the year ending December 31, 1896.

The organization of the regular force remains substantially the same as last year, with one Chief of Police, and eight regular men. One officer is on duty in day time, five regular and two special officers do patrol duty at night. One regular officer is on duty at the lock-up at night, and one is detailed on inspection duty, and their places are filled by two special officers. One regular officer has died during the past year, Michael J. Canavan, and his place has been filled by the appointment of David J. Barry.

The work in the department has been done I think in a satisfactory manner, and will merit the approbation of all law-abiding citizens.

“ “ discharged in “ “	1
“ committed for non-payment of fines	1
“ convicted in Superior Court	4
“ discharged in “ “	3
Aggregate of fines imposed by District Court	\$925 00
“ “ “ paid to District Court	375 00

FINANCIAL.

The expenditures of this department have been within the appropriation, viz. :

Permanent Police	\$6,656 00
Special Police	2,694 00
Enforcement of liquor law	1,200 00
Police Station	450 00

The ordinance creating the Police department has been changed and another officer will be added to this force, and the money for his pay will have to be in addition to the appropriation of last year; further than that, I know of no reason why the appropriation should be changed from 1896.

It seems needless for me to re-state the needs of this department, when they are so well known to every one that has any business with it. They have been fully set forth in my reports for 1894 and 1895, and the reasons given why these wants should be supplied. If there is not something done before another winter, lodgers will have to be accommodated by the department to which they belong, the poor department. We need a Police Station; we need more room, prisoners and lodgers are huddled into this place like sheep in a pen. As much as we need a Police station, we need a horse and patrol wagon, and a patrol wagon is but very little use without Signal Service.

In conclusion I desire to express my thanks to His Honor the Mayor for his council and support, and also to all members of the Police Department for the able and faithful manner in which they have performed their duty, and to all others who have assisted me in the discharge of my duty, by word or deed.

Respectfully submitted,

JOSEPH W. HAYDEN,

Chief of Police.

Report of the Fire Department.

To His Honor the Mayor of the City of Quincy:

In compliance with the requirements of the City Ordinance I hereby present my third annual report for the year ending Dec. 31, 1896, containing a statement of all fires and alarms for the year, the loss and insurance on the same as far as could be ascertained, a list of the permanent force of the Department and their ages, also a schedule of the property under their charge.

ORGANIZATION.

The force consists of one chief and six assistant engineers, six permanent men, sixty-four call men, three hose companies with ten men each, one ladder company of twelve men, two combination chemical engines and hose wagons, one with ten men and one with eleven, one hose wagon at Houghs Neck with 1000 feet of hose and volunteer company with a steward to take care of apparatus.

APPARATUS.

The apparatus consists of one steam fire engine in good condition, two combination chemical engines, one ladder truck, four hose wagons, three hose reels and one hose carriage, one express wagon for fire alarm purposes, one exercise wagon loaded with 1000 feet of hose, ready at all times, at Central Fire Station, in case of a large fire. Also one chemical engine and one hand engine that are not in service.

I will again call the attention of the Council to the need of better fire protection in the north part of the city as that part of the city is very poorly protected at present.

The number of horses in the department owned by the city is nine. We have in service 9000 ft. cotton hose rubber lined, 1500 ft. of which is in poor condition. The water supply continues to be good. New hydrants have been added in several parts of the city, thereby increasing the facilities of the department to get a better supply of water and to use shorter lines of hose. Twenty-three new hydrants have been added the past year making the whole number 355. I would recommend putting in 50 hydrants on the old line of pipes as that would give shorter lines and better fire protection.

RESERVOIRS.

The reservoirs are 14 in number, and are in about the same condition as they were a year ago.

FIRE ALARM.

There have been 200 jars of gravity battery taken out the past year and storage battery put in their place; thereby giving better fire alarm service.

CONCLUSION.

In closing this report I desire to tender my sincere thanks to his honor the Mayor for his interest in the welfare of the department, to the Council for all favors rendered me during the year, to City Auditor Hall and Treasurer Gray for all favors rendered, to Chief of Police Hayden, officers and men, for the efficient manner in which they performed their duties at all fires; to the committee on fire department, for the interest they have manifested in the business of the department, to my associates of the board of engineers and to the officers and members for the prompt and efficient manner in which they have discharged their duties, thereby maintaining the reputation of the department for efficiency.

FIRES AND ALARMS.

There were 52 alarms during the year, 42 bell alarms and 10 still alarms.

The value of property at risk, \$177,600 ; loss \$21,503.15.

Insurance upon same, \$137,693.00.

Loss on property for 3 years, \$50,176.04, with 167 alarms.

PERMANENT FORCE.

Thomas Crane Public Library.

To His Honor the Mayor of the City of Quincy :

The Trustees of the Thomas Crane Public Library beg leave to submit the following report, it being the twenty-sixth of the series since the Library was opened.

There are thirteen thousand seven hundred names now registered of persons using the Library with more or less regularity. Seven hundred thirteen names have been added during the year. Nine hundred eighteen books have been purchased. Of these, two hundred eighty-three have been books replaced. Certain standard authors, especially in juvenile fiction, are in such constant use, that the Librarians find it necessary to replace them frequently. Seven hundred sixty books have been rebound. One hundred twenty-two books and seventy pamphlets have been presented to the Library.

The Trustees find the condition of the Library very satisfactory. Looking backward twenty-five years it will be seen how valuable a work it has done in that time. From small beginnings it has grown with the years, each year revealing a rising level in the judgment, good taste and intelligence of its readers. It must be understood that the primary object of a Library like this is to minister to the needs of the people. In

this respect its purpose is, perhaps, a little different from some other libraries. It has never aimed to be a consulting Library for a few isolated scholars. However valuable such a Library might be under other conditions the Trustees have agreed in deciding that they did not obtain in the City of Quincy. There are special Libraries for special scholars within a short distance from us where the rare and costly works required in their investigations could be found. Were we five hundred miles from a great city the conditions would be entirely different.

Such being the case the Trustees have felt that the present duty is to furnish the supply to a demand. They have endeavored to do this in the past. This is their policy to-day. What is that demand? Nothing less than the desire of the people—their demand for reading matter. It is useless to fill up the shelves of the Library with books that are not read. The wisdom of this policy may be seen in the small number of unread books remaining in the Library. The Trustees have endeavored to give the public the best class of the books it asked for.

Of course, among these, fiction ranks first, fifty-six per cent. But it must also be said that the demand for fiction is very largely the old, well worn, standard authors. This is as it should be. It betrays a healthy tone and taste. The call for passing and ephemeral books is not large.

When a man returns from his day's work and looks about for a book for his evening reading the chances are that he wants, not an essay nor a treatise; he is too tired for them; he wants a story and he ought to have it. Now there are a great many people like him, a large and increasing class for whom fiction is a means of mental recreation. The purpose of the Library is to furnish it, of the best kind and quality.

The Trustees are also giving increasing thought to juvenile literature. It is a serious and important matter. There are dangers in this direction of which they are most aware who know what books their sons and daughters read. The name of such books is legion. Many are actually vicious. Still more are foolish. Others are very good indeed, and those it is the object of the Library to furnish.

The Trustees also desire to keep in touch with the educational interests of the city. They feel that their work must be limited unless they can co-operate with them. The demand for books on educational topics will be met with pleasure.

The circulation of the Library has increased about two thousand during the past year, showing a steady growth. There has also been an increased demand for books treating upon living questions,—history, travels, the new lands that are opening up to the gaze of the world. One by one the gates of the far East are becoming unclosed and there is inquiry concerning what lies behind.

Young men are asking for books upon economics, mechanics, electricity, art and architecture. It is instructive to note the change in these directions. It also shows that our Library needs to be alive to the drift of events. It should not only supply the demand, but also create it. It is impossible for it to reach its true rank as an educational institution unless it does this. It hopes to be equal to the occasion. Certainly it will not be the fault of the officials connected with it if it is not. But Quincy is no longer a provincial village. It is a rapidly growing city and the facilities of the Library must be commensurate with that growth in order to control the situation.

Our Library is fortunately housed in the beautiful and commodious Crane Memorial structure and with a wise and generous policy there is no reason why it should not continue to be an honor to our city as well as an increasing power for good.

Office : Rooms, 20—21 Adams Building.

Water Department.

Quincy Dec. 31, 1896

To His Honor the Mayor and the City Council of the City of Quincy:

Gentlemen:—The board of Water Commissioners respectfully submits the following, its fifth annual report for the year ending December 31, 1896.

At the beginning of the year the Water Board consisted of Mr. W. G. A. Pattee, Chairman, Mr. James H. Stetson, Secretary and Mr. John T. Cavanagh. Mr. Stetson having refused to accept a reappointment, Mr. Charles T. Baker of Ward 5 was appointed January 31, for a term of three years.

The Board organized at its first regular meeting in February by electing Mr. Pattee, Chairman, Mr. Baker, Secretary and Mr. Cavanagh Superintendent for the year.

On February 27, Mr. Cavanagh resigned as Water Commissioner and on May 20, Mr. Pattee resigned his office, whereupon Hon. Henry O. Fairbanks of Ward 5 and Mr. Marshall P. Wright of Ward 4 were appointed on June 25, to fill the vacancies.

The principal work for the year has been the extending of street mains and laying of service pipes. The amount appropriated for this work was eighteen thousand (\$18,0000.0) dollars.

On the first day of April a contract was made with the McNeal Pipe and Foundry Company of Burlington, New Jersey, to deliver 411 tons of cast iron pipe, in sizes from 4 in. to 8 in. at twenty-three dollars and thirty-cents (\$23.30) per ton, all of

which was delivered in good condition and within the specified time.

The laying of the 16 in. pipe on Common Street is still incomplete as the Board does not deem it necessary until steps are taken toward the erection of the stand pipe on Third Hill, Ward 5.

Water mains were extended on Old Colony, Deldorph, Cranch and Whitwell Streets, West Elm Ave., Arthur Street, Nightingale Ave., Liberty, Park and Wilson Streets, Larry Place, Furnace Ave., Winter Street, South Street, Walley Road, Norfolk, Morton, and Ballou Streets and several other minor extensions. Also 1200 feet of 2 in. pipe was laid in Mount Wollaston Cemetery and 600 feet of 6 in. pipe was laid on land belonging to the City Poor Farm. Two new fountains were connected and several stand pipes for the Street Sprinkling Department were added, 301 new services were laid and 23 hydrants set.

The gross receipts for the year are \$52,300.97. The total interest was \$29,709.94 and the total maintenance \$14,323.81: the balance \$8267.22, together with the 225 new hydrants for which the Department has received no credit, we consider a very large gain over previous years, and a good profit to the City.

On account of the great amount of rain fall during the months of September and October, the supply of water in the reservoir has been quite sufficient to meet all demands for the year. Investigation is now being made with regard to obtaining an additional and temporary supply, in case of a dry season, as the Board is of the opinion that it will be at least three years before the City will receive any benefits from the Metropolitan System.

Tables of receipts and expenditures and bond account are affixed to this report for reference.

For minor details of work done by this Department, see report of the Superintendent annexed hereto.

HENRY O. FAIRBANKS,

M. P. WRIGHT,

CHAS. T. BAKER,

Water Commissioners.

Report of Superintendent.

To the Board of Water Commissioners of the City of Quincy :

GENTLEMEN:—I have the honor to present herewith the annual report of the Superintendent for the year ending December 31, 1896.

A full account of stock in the several departments, was taken in January which may be found recorded in the office.

Scarcely any money was spent on the reservoir this year, as it was considered the best economy to get along as cheaply as possible, the City Council having voted to enter the Metropolitan Water Supply System.

The Water levels have been taken regularly from May 9, the day the water ceased flowing over the dam, until the water overflowed again December 8th. The water reached its lowest point September 5, being 7.55 feet below the overflow, while last year it was 9.66 feet below.

The chemical and microscopical examinations of the water in the reservoir have been made each month, copies of which are on file in the office.

The quality of the water the past year has been considered better than in previous years. Fewer complaints have been made than heretofore. This is probably due to the fact that there was more water in the reservoir, and that particular at-

tention has been paid to clearing the pipes of stagnant water which collects in the dead ends.

The average daily consumption of water is 1,033,669 gallons, an increase of 129,517 gallons over the average daily use of 1895. The total consumption for the year was 378,323,085 gallons. The maximum quantity used, was 1,707,604 gallons on July 13. The minimum quantity used was 763,344 gallons on February 16.

Little or no money was spent on improvements in and about the Pumping Station. The pumps are in good order and run apparently as well as ever. The boilers are in good condition and have been inspected regularly by the Hartford Steam Boiler Inspection Company. The reports of the inspectors can be found in the office.

No money was spent on the stand pipe during the year, but I would recommend that it be cleaned the coming season for the amount of deposit, on account of the condition of the water, must be very great as it has not been cleaned since August 1894.

Few leaks have occurred during the year, the only serious one being at the corner of Water and Franklin streets, caused by the joint in the 20 in. main, laid by the Water Company, giving out.

On account of not being able to close the gates on the old lines of pipe, it makes it more difficult to repair leaks, or shut off the water, and I advise that the appropriation for maintenance be made large enough this year to have these gates inspected and put in proper working order.

An examination of the summary of work done by this Department the past season, will show that a less number of feet of main pipe has been laid than usual although nearly as many different extensions have been made, while the amount of rock excavation was a great deal more than any previous year.

3.1 miles of pipe were laid, 301 new services put in, 23 hydrants and 42 gates were set.

The total length of street mains December 31, 1896 is 66.11

miles. The total number of service connections is 2861. The total number of hydrants set is 355.

I would like to add here, that in the 33 miles of pipe laid by the city, not one bad joint has been found or one leak discovered.

On account of the pipe laid by the Quincy Water Company in certain streets, being so small, preparations must be made to replace them by larger ones at an early date.

I also find that the smaller sizes of kalamein pipe laid in certain localities are causing us considerable trouble, while in other places the pipe appears to be in as good condition as ever. Just what the cause of this may be is not yet known as the State Board of Health is making an examination of the case and as yet has made no report.

I have experimented with and have had laid a number of services with lead lined iron pipe, and find it gives entire satisfaction and I recommend the use of this pipe for service work as it is more easily handled and is less expensive than lead. I find it is almost useless to use galvanized iron pipe, as the action of the water on the inside of the pipe forms a coating which in a short time will entirely clog the pipe and render it unfit for use.

A regular inspection has been made of each hydrant, especially during the winter months and in this manner they have been kept in complete working order. It will be well to add a few new hydrants the coming season in the thickly settled parts of the city where the pipes were laid and the hydrants located very far apart by the Quincy Water Company. Hydrants are cheaper than hose, and short lines of hose made possible by a generous number of hydrants are much more efficient than longer ones.

The Smith tapping machine purchased by the department in September has been used to good advantage and I am pleased to think we are able to make any size connection to our main pipe, without shutting off the water and thereby obviate the great risk that would otherwise have to be taken in such cases.

The pipe borrowed from the town of Braintree and Weymouth has been returned.

I subjoin the following tables, the record of consumption amount of rainfall, miles of pipes, number of gates and hydrants, etc., all of which is respectfully submitted.

JOHN T. CAVANAGH, Superintendent.

DAILY AVERAGE CONSUMPTION.

The daily average consumption in gallons is given by months for 1893, 1894, 1895 and 1896 :

	1893.	1894.	1895.	1896.
January . . .	593,892	665,730	707,432	877,364
February . . .	592,859	649,929	721,573	883,540
March . . .	636,674	679,022	743,156	897,842
April . . .	619,433	672,334	770,143	917,194
May . . .	658,774	805,912	957,858	1,093,820
June . . .	804,757	985,312	1,216,609	1,182,683
July . . .	1,019,338	1,121,689	1,032,128	1,199,698
August . . .	915,400	960,640	1,172,848	1,199,921
September . . .	804,241	870,015	1,009,194	1,048,831
October . . .	760,648	750,728	834,322	1,004,558
November . . .	680,724	703,061	851,171	1,045,497
December . . .	653,638	698,540	823,153	1,045,320
<hr/>				
Daily average by the year . . .	729,490	797,999	904,152	1,033,669

RAINFALL.

The rainfall in inches as measured at the pumping station for each month beginning January 1893 was :

	1893.	1894,	1895.	1896.
January . . .	1.81	1.73	4.18	1.64
February . . .	5.6	3.01	.83	3.9
March . . .	3.17	1.1	3.02	6.13
April . . .	2.7	3.79	4.78	1.34
May . . .	4.85	3.71	2.67	3.23
June . . .	2.88	.44	1.59	3.77
July . . .	1.85	3.04	4.17	2.96
August . . .	6.1	1.98	3.84	2.57
September . . .	1.05	2.94	1.51	10.1
October . . .	3.62	6.68	6.88	4.21
November . . .	2.23	4.20	8.06	3.48
December . . .	4.69	4.64	2.55	1.07
<hr/>				
Total . . .	40.55	37.26	44.08	44.40

Board of Sewerage Commissioners.

QUINCY, Mass. January 1, 1897.

To His Honor the Mayor of the City of Quincy:

The Board of Sewerage Commissioners respectfully submit the following report:

The sum of \$5,000 was appropriated July 6, 1896, for the purposes of making the necessary preliminary surveys preparatory to commencing the constructing of sewers. About August 1, 1896, suitable office accommodations were secured in the Adams Building, and Mr. E. W. Branch, C. E. was employed to take charge of the engineering department; Mr. George A. Kimball, of Boston, being retained as Consulting Engineer.

The sum of \$3,090.44 has been expended by the Board leaving an unexpended balance of \$1,909.56.

For a general description of the work accomplished, we refer to the accompanying engineer's report.

Respectfully submitted,

H. T. WHITMAN,

Chairman.

ENGINEER'S REPORT.

QUINCY, Mass. January 1, 1897.

To the Board of Sewerage Commissioners of the City of Quincy:

GENTLEMEN :—

In accordance with your instructions I have been engaged, as Engineer of your Board, since the first of last August in making the necessary surveys and plans for the construction of a system of sewerage for the City of Quincy. As a general system, designed by Mr. H. T. Whitman and myself, and approved by Mr. Albert F. Noyes, Consulting Engineer, had already been adopted by the City Council, the work that remained for me to do was to make detail plans for the construction of the system.

An efficient working force has been established and the work has progressed steadily. We have now in the office levels taken on fifty foot stations over about sixty miles of streets and ways; on most of these streets we have also noted the elevation of the sills and cellar bottoms of the houses. The work of plotting profiles from these levels is now in progress, about 42½ miles having been completed. These profiles are plotted on mounted profile paper and are in such form as to be available not only for sewer construction but also for highway, surface drainage and other studies.

We have also general levels, taken usually on stations 100 feet apart, over a number of additional miles of streets besides many elevations on private lands, so that now we have nearly all the levels needed for finishing the detail plans for those sewers needed for the immediate future as well as for determining the sizes and grades of sewers throughout the City.

Topographical surveys have been made of the lands in the vicinity of the Pumping Station and of the valley of Furnace Brook.

Plans and specifications have been prepared for building the main sewer from the pumping station to Elm Street. This sewer will provide an outlet for the sewage of Quincy Centre, Quincy Point, South Quincy and a portion of West Quincy.

A careful study of the details of pumping station, its approaches and equipments is now being made.

We have prepared accurate plans of some sections of the city which will be essential to the progress of the work. These plans, which are plotted on large sheets of mounted paper on a scale of 40 feet to an inch, will be valuable not only during construction but also may be used afterwards as a basis for sewer assessment plans, as well as for any other use to which accurately drawn plans may be put.

Such progress is being made that by early spring detail plans will be ready for the construction of the main sewer to Quincy Centre, the Pumping Station, the force main from the pumping Station to the Boston Outfall Sewer and for several miles of lateral sewers.

In addition to these, general plans of the whole system will be ready.

Respectfully submitted,

E. W. BRANCH,

Engineer.

Law Department.

To His Honor the Mayor of the City of Quincy :

SIR:—The suits against the city, which I mentioned in my report to you last year, have all been disposed of excepting that of Mason Batchelder, which case is still pending in the District Court of East Norfolk. The disposition of the other cases was as follows:—

In Stephen Neagle vs. the City of Quincy, the jury returned a verdict for the plaintiff in the sum of \$1,925 which with costs amounted to \$2,151.70. The city paid the same to Mr. Nagle. I shall refer to this case later.

The case of Maggie Tipping was settled, with your approval, for \$167.

The suit of Mary Nelson for \$4,000 was tried before a jury at Dedham, resulting in a verdict for the city.

The suit of Bridget Dolan also for \$4,000 damages was reached at the October term, and after a two days' trial, the jury awarded the plaintiff a verdict for \$100. The city paid the same.

In the suit of James E. Cotter, referred to Andrew J. Bailey as auditor, Mr. Bailey found for the plaintiff in the sum of \$3,497.37 which includes interest at six per cent. for nearly three years. The city is the custodian of the Woodward Fund and this suit consequently was brought against the city for

services rendered the fund. As a large number of the children of our citizens cannot avail themselves of the benefits of the school, the Board of Managers of the Fund has paid the verdict and expenses out of the trust property. The taxes paid by the citizens are not affected thereby.

In reference to the petition for the widening of the bridge and approaches thereto, over the railroad on Hancock street, near the Atlantic station, everything was done before the Board of County Commissioners that could be done. Views were taken, evidence offered, plans in detail made and submitted, and eventually the representatives of the railroad agreed that the widening petitioned for was necessary. The Board of Commissioners, as composed last year, however, took no action in the matter. I propose to renew the petition before the present Board, and expect that they will give us some relief. If, however, we are not then successful, I shall appeal to the Railroad Commissioners of the state.

Since my report to you of last year, the following suits have been entered against the city:—

Joseph H. Churchill vs. City of Quincy, which is a petition to the Superior Court to assess damages for certain land taken by the city, and damages done to Mr. Churchill's remaining property on Clive street. This land was taken in the extension of Walker street.

Lucy Larkin vs. the City of Quincy is also a petition to the Superior Court for the assessment of land damages arising from the same cause as the Churchill case.

Phœbe Harris vs. the City of Quincy is an action of tort to recover \$4,000 damages for personal injuries sustained by reason of an alleged defect in the condition of the sidewalk on Hancock street, near Tilton's hardware store.

Inasmuch as the accident on Washington street complained of in the Nagle case, was caused by a ridge of snow thrown up by the plow of the Quincy & Boston Street Ry. Company, it is my opinion that the damages paid by the city in that action, together with our disbursements incurred in the defense of the same can be recovered in an action brought by the city against the street

railway company. I therefore have brought such a suit which is now on the short list at Dedham and which I expect will soon be tried.

During the year there has been the usual number of claims made and suits threatened against the city for damages, for injuries on highways and otherwise, most of which, I am gratified to report, have been abandoned, and of which none for personal injuries have been settled by the city.

Concerning my duties as the legal adviser to the city I would say that I have been in almost daily attendance at City Hall and have rendered to the heads of the departments, when requested, such assistance as lay in my power. I have attended meetings of the City Council and have submitted opinions as to the law relating to matters in question both to the council and yourself when asked to do so.

Respectfully submitted,

PAUL R. BLACKMUR,

City Solicitor.

Report of City Clerk.

CITY CLERK'S OFFICE, Jan. 1, 1897.

To His Honor the Mayor of the City of Quincy.

SIR:—I submit herewith the eighth annual report of this office, for the year ending December 31, 1896.

RECEIPTS.

Marriage licenses	\$101 50
Dog licenses	195 80
Other licenses.	194 00
Recording mortgages, etc.	167 75
Total	<hr/> \$659 05

The above sum has been paid to the City Treasurer, as will appear by his account.

Number of marriages recorded in	
1896	215
Number of deaths recorded in 1896	366
Number of births recorded in 1896	741
Number of marriage intentions re-	
corded in 1896	203

Number of dogs licensed, 882 males, 80 females, 1 kennel, for which the sum of \$2,189.00 was received, of which \$1,993.20 was paid to the County Treasurer, the remainder being included in the above account of receipts.

Annexed are lists of births, marriages and deaths recorded in Quincy in 1896, the election returns for 1896, and the Jury List for 1897.

Yours respectfully,

HARRISON A. KEITH,

City Clerk.

Adams Academy.

To His Honor the Mayor of the City of Quincy:

The managers of Adams Academy respectfully represent that little has occurred during the past year deserving of comment. The limited income of the school has obliged the teachers to confine themselves to the unique object of preparing pupils for the colleges, and in this respect it still maintains a good standard. The necessity of providing more thorough education in experimental physics has led to the introduction and use of gas in the physical room; but this has been attended with very little expense and risk. One fellow citizen, Edward Southworth, Esq., generously offered a handsome gift as the nucleus of a fund to buy physical apparatus. This offer has been generously responded to by graduates and friends of the school, and a considerable amount of apparatus has been bought, to the great and obvious improvement of the instruction.

The managers have seen their way, by some change in the method, of supplying fuel to heat the building at decidedly less cost.

Though the school has been attended by a less number than ever before in its history, there has been no lack of interest in the studies or exercises. Whatever the development of the

public school system, there will always be in cities like ours a number of citizens who prefer the advantages offered by a smaller institution, attended exclusively by one sex. In view of the limited income of the school, not likely to be increased at an early date, the managers commend the Academy to the citizens, especially those who have been educated within its walls as an institution, which, having done excellent work in the past, is eminently worthy of their liberal aid in the future.

Respectfully submitted

CHAS. A. HOWLAND,
WILLIAM EVERETT,
JOHN O. HALL,
JAMES L. EDWARDS,
WILLIAM R. TYLER.

Managers.

Report of Managers of the Woodward Fund.

To the City Council:

We present herewith our financial account of this Fund for the past year. During this year we have completed the school building, giving the accommodations which the Board of Instruction of the school requested. In conference with the Board of Instruction it was the opinion that but \$20,000 could be spared from the Fund for the new addition, and it was finally voted to confer with Messrs. Rand & Taylor, Kendall & Stevens, and to employ them to furnish plans. In the latter part of May bids were received and the contracts for the erection of the building were awarded. The plan finally presented gave the arrangement of the rooms which was desired and brought the expense of construction within the limit which could be expended for that purpose. The lot of land upon which this building had to be located was in very poor condition

to build upon, being very much below the grade of Hancock and Greenleaf streets, but it was the location decided upon by the concurrent wisdom of all preceding Boards and this Board has made the best use of it that could have been made under all the circumstances.

Much uncertainty existed at the time when the Board was obliged to build, in order to have the School established within the period required by the will of Dr. Woodward. This uncertainty was occasioned by the action of the Board of Instruction insisting that six per cent. on the fund should be paid to them annually for the maintenance of the school, and was an obstacle to the construction of such a building as this Board would have desired to erect. This claim of the Board of Instruction necessitated a petition to the Supreme Court for an official interpretation of the will of Dr. Woodward. It was impossible to await this decision before beginning to build and the Board did not feel that it would be wise to build an expensive building which the city of Quincy would have to buy, if, by any possible chance, the decision of the court should be against us. The Board of Instruction could not at that time give any idea of the course to be pursued in the conduct of the school and under all these conflicting conditions the building first erected was deemed the most suitable. This Board feels satisfied that it has given the citizens of Quincy a building adapted to all the needs of this school for a good many years, and at a very low cost.

The bill of the attorneys in the above mentioned case before the Supreme Court was originally \$4,500, which the Board declined to pay on the ground that it was too large and the matter was referred to an auditor, who awarded \$3,497.37. This amount has been paid this year, together with \$400 for additional legal services in the case.

The grading of the entire lot is to be done the coming season and when this is completed we feel that the appearance of the building will be very much improved and that the entire work will meet with the approval of our fellow citizens. The Board has

been obliged to take the property of Harris Farnum at the junction of Copeland and Crescent streets in Ward 4, by foreclosure of its mortgage, for non-payment of interest. We are confident that no ultimate loss will come to the Fund on this account.

CHARLES F. ADAMS, 2nd.,
H. WALTER GRAY,
HARRISON A. KEITH,
JOHN O. HALL,
CLARENCE BURGIN.

Managers.

Woodward Fund and Property.

TREASURER'S REPORT.

Respectfully submitted,

H. WALTER GRAY,

Treasurer of the Fund.

Quincy, January 1, 1897.

Woodward Institute.

In behalf of the Board of Directors, the following report of the Principal of the school is herewith submitted to the public.

It is hoped that this report will prove sufficiently explicit in details to give a clear idea both as to what we are trying to do, and what we hope to accomplish under the more favorable conditions of ample accommodations, beaten paths, and pupils with us from the beginning. Woodward Institute, when weighed in the balances, even now, is not "found wanting." A year or two more and the school will prove its right to its chosen motto, "Strong to live."

EDWARD A. ROBINSON,

Secretary Board of Directors.

To the Board of Directors of Woodward Institute:

GENTLEMEN:—The past year, although filled with difficulties and discouragements, has brought us much of success and encouragement. We are beginning to understand by experience that old saying, "Per aspera ad astra," and to look for the light that may sometime shine for us.

FOUNDER'S DAY.

The incidents of school-life worthy of mention have been a few.

On Founder's Day, March 12, our pupils consented to occupy the recitation-rooms where they could hear, although they could not see, thus furnishing in the hall-way one hun-

dred and thirty sittings for guests, of whom each girl invited one to take her own place. The programme prepared for the occasion was supplemented by speeches from Mr. H. Walter Gray, representing the Board of Managers of the Fund, and Rev. E. C. Butler and Rev. A. F. Roche of the Board of Directors.

In this report, for the last time, probably, is recorded any inconvenience arising from lack of suitable accommodations. We expect to greet our friends next year in the new hall which will then be ready for occupancy.

GRADUATION EXERCISES.

The first graduation exercises were held on the evening of June 17, in the City Hall, the use of which the City Council kindly voted. The Unitarian Chapel was generously granted for the class reception on June 18. For the favors thus bestowed, we would express our grateful appreciation.

The graduation address was delivered by President Merrill E. Gates of Amherst College, to an attentive audience of seven hundred people. Among the number we were pleased to greet those members of the Board of Directors who had served so acceptably at the opening of the school in April, 1894. Their presence showed their continued interest in Woodward Institute, and gave us that encouragement which is so often needed.

Diplomas were granted to seven young women, of whom two were previously graduated from the Quincy High School while the others had come to us from Thayer Academy, Miss Hersey's school and Lasell Seminary. Five of these seven graduates returned to the school in September for advanced work.

THE FALL TERM.

Our new building was still in process of erection when the time for opening school came in September. By great effort the old building was made ready for the fall term to begin on Thursday, October first. The record of the succeeding three

months would tell of the constant noise of many workmen on the opposite side of a thin partition, of cold draughts, of dark study halls, of the lack of comforts generally. Of the many petty trials which together made a large burden, no one spoke complainingly in the presence of the pupils. Our school home was kept happy with the promise of better things to be; but when the holidays arrived, the vacation rest was more needed by both teachers and pupils than has ever been observed since the school opened its doors for work.

A WORD TO PARENTS.

Our pupils as a whole have shown improved health and strength during the year. I would here urge upon all mothers the necessity of requiring their daughters to bring wholesome lunches. It need not be said that pickles, cake and candy, so toothsome to the young girl, are not as desirable food as fruit and sandwiches which now form the larger part of the Woodward lunches. Our girls should be "strong to live, as well as to think."

The most important factors in a girl's healthful living can not be given by the teachers of a day school; diet, regular sleep, exercise and social duties are all without the teacher's province. She can advise merely. For the kindly interest manifested and the encouragement given by many parents, the Principal would acknowledge her pleasure and indebtedness. Once again would she ask the co-operation of all parents for obtaining the best results in school work. The school-room is the pupil's place of business; its duties should not be neglected. Attendance should be regular, unless sickness prevents. Each girl should be present at the opening exercises every morning. Dismissals should be rare.

HOME STUDY.

We would ask the parents of the girls in our fourth and fifth classes to make sure that study out of school is properly

done. We find frequently that much time is spent upon lessons to little advantage, owing to a careless habit of idling during the study hour; this may be remedied partly in school, when the girls have a comfortable study-hall and the steady guidance of a teacher; concentration of mind upon the work in hand will then form a part of their daily discipline.

REPORTS.

Reports are sent home at the end of each term. Every few weeks, notice is sent concerning those girls who are unsatisfactory in any department. Each girl can herself easily take the measure of her daily work; if she knows that she is below the average of her class, she also knows that her teachers are ready to give extra help, even when such work is due to carelessness. The girl who will try is always sure to find an eager interest in her welfare; the idler often wishes the teacher's interest were not so impartial. The slow, the dull, or the indifferent girl is never slighted. Such a one is conscientiously cared for with far more effort than is ever given to her quicker or more tractable schoolmate.

In the higher classes improvement is noted in the power to study easily and happily. This has been most plainly seen in the graduate class; their instruction is a pleasure.

IMPROVEMENT.

Our girls are learning to obey promptly, and to do the necessary thing without special direction so to do. They are taking pride in doing well whatever is to be done, realizing that the excellence of the school depends upon themselves as individuals no less than upon the efforts of their teachers. The pupils, as a whole, try to do right; if they fail, they frankly confess their error, and courageously try again.

COURSE OF STUDY.

Three years ago a course of study was planned and accepted with the provision that it should be "tentative, and subject to whatever change the best interests of the school may demand."

The needs of this community were not then sufficiently well known to the Principal to warrant an absolutely fixed curriculum. However, in the main, the course then prepared has been followed. We present to you today the first outline of work, together with the revised form.

When the Woodward opened, there were two classes in Grammar School work. One was dropped in September, 1894, the other in September, 1895. The school could not afford to extend its course of study over so many years, and it seemed best under the circumstances to furnish Quincy girls with advanced rather than elementary work. This decision has proved a wise one, and it is believed to carry out most fully the intention of the Founder, who desired to provide for the higher education of Quincy-born girls.

THE CLASS OF 1899.

The first class started at Woodward will be graduated in 1899. For a year longer there will be irregularities in work caused by the making up of deficiencies in courses pursued before pupils were placed under our care. In September, 1898, the senior class will have had substantially the course of study here presented, and the whole work of the school will be entirely regular. In order to show the work done by the individual the following statements are given concerning this class. It now consists of thirty-two members. Of these, six elect Greek, eleven Latin, twelve French, seventeen German, fourteen science, twenty-eight history, seven stenography, eight type-writing, twenty-four algebra. Seven girls study both French and German, two Latin and French, one Latin and German, and five elect Latin, Greek and German. Seven pupils do not elect a foreign language.

It can be seen that diligence in study is necessary with such full courses; each pupil chooses for herself without being urged to do more; in fact, many are advised to do less. The health of this class is good and the attendance regular; deportment takes care of itself, for there are no idle minutes, and its scholarship is noticeably excellent.

COLLEGE PREPARATORY WORK.

In June, one of the class of '96 took entrance examinations for Boston University and Bryn Mawr, which latter college she has entered. She received honors in several studies including Latin, Mathematics and French, and special commendation for the uniform excellence of her college preparatory work, all of which was given at Woodward with the exception of Greek and Roman History, a subject omitted from her course of study before entering Woodward Institute. As our fourth class would spend a year instead of a few months upon this study, and the teacher's time was too fully occupied to permit of such extra work with one pupil, Miss Bessie Burns kindly consented to do this special work.

As this is our first effort in the direction of college preparation, it is considered worthy of mention as showing to parents the opportunities offered at Woodward Institute in this line of work.

We trust that the liberal course of study now offered to Quincy-born girls may continue to be no less broad than at present; that the income, even with increased expenditure for the new building, may suffice to carry out the plan upon which the school was founded, and the work thus far has been conducted.

AN URGENT NEED.

Our schools needs the benefactions of those interested in the higher education of Quincy girls. Especially do we need an endowment for the department of Natural Science. As is well known, we are obliged to exercise the greatest economy in

order to provide for the needs that cannot be put aside ; apparatus and specimens are costly, yet necessary for good teaching.

NUMBER OF TEACHERS.

We often hear it said that at Woodward there is one teacher for every ten pupils. That reckoning is misleading and cannot properly be applied in our case. It will be seen by the daily schedule that each teacher has charge of a department, and teaches both large and small classes. The teacher of Art is present one day in a week ; the teacher of French occupies all her time Monday, Wednesday and Friday, and the teacher of Gymnastics is equally busy on Tuesday and Thursday.

In any school, it is not alone the number of pupils that requires a large force of teachers, but the number of recitations demanded by such a course of study as Woodward Institute furnishes. We should be pleased to have our two upper classes as large as the three lower classes, as even then the number of teachers need not be increased.

VISITORS WELCOMED.

Parents and the general public are cordially invited to visit the school. We can afford little time just now for entertainments, owing to the necessary shortening of the school year. At any time we prefer to be known by our daily work which tells better than anything else of the nature of the training in the several departments.

There have been many changes in the Board of Directors within a year. To those members who have so kindly and wisely given of their time and advice since the opening of this school, I would express my gratitude. To the new members I look for the same hearty co-operation, the same impartial interest, and the like wise consideration of our affairs that from the beginning have characterized the Board of Directors of Woodward Institute.

Respectfully submitted,

CARRIE E. SMALL,

Principal.

Departments.

DEPARTMENT OF ENGLISH.

(Required.)

Teacher,—FRANCES C. LANCE.

1st year.—American Poems: Longfellow and Whittier. Two recitations a week. Grammar, once a week; composition, twice a week: constant exercise in grammatical expression. Aim: to teach the student to understand what she reads, and to enjoy simple poetry; to stimulate interest in the correct use of English, spoken as well as written.

2nd year.—American Poems: Bryant, Holmes, Lowell. Two recitations a week. Grammar, once a week; composition, twice a week. Aim, as above.

3rd year.—Essays and short stories by American and English writers: Hawthorne, Irving, Holmes, Lowell, Emerson, Burroughs, Warner, Thoreau, Bacon, Lamb, Carlyle, Macaulay, etc. Two recitations a week. Work transitional between grammar and rhetoric, based on Hill's Foundations of Rhetoric: twice a week. Original composition: reports, oral and written, on selections read: twice a week. Aim: to introduce the student to a few good forms of American and English prose, and to encourage discriminating enjoyment in the independent reading of thoughtful literature.

4th year.—Outline study of English literature to Shakes-

peare, including the reading of selections from the works of great authors in the periods studied. Two recitations a week. Rhetoric: study of elements of style, based on Genung's *Outlines of Rhetoric*: description; narration. Rhetoric and composition, each twice a week. Aim: to give a general view of the development of English literature and the English language; to cultivate literary perception and taste; to elevate the student's ideals for her own use of English.

5th year.—Literature: continuation of work of previous year into 19th century: two recitations a week. Rhetoric: qualities of style, based on Genung, Wendell, and Abbott: exposition; argument. Rhetoric and composition, each twice a week. Aim, as in previous year.

Graduate work.—Literature: 19th century English authors; selected works of Scott, Wordsworth, Tennyson, George Eliot, Macaulay, etc. Three recitations a week. Study of the paragraph: study of style, as illustrated in works read. Three recitations a week. Aim: to train and encourage appreciative literary criticism.

Throughout the course careful attention is given to spelling, punctuation, and sentence-structure. There is close and constant correlation between literature, grammar, rhetoric and composition. Effort is made to find and preserve a happy balance between natural enjoyment of the pleasing and concentrated attack of the difficult.

DEPARTMENT OF HISTORY.

(Required.)

ENGLISH, GREEK AND ROMAN.

Teacher,—MAUDE E. RICE.

The first two years of work in history are required, in order that the student may become familiar, not only with the leading facts of ancient history, but that she may be taught skilful

handling of books and the best method of investigating questions for herself.

That these earlier courses may be the more readily understood, they are put on a biographical basis, for history is but the lives of great men. With enough historical setting to understand the influence of the times upon their characters we have a study of men which any child may understand.

1st year.—English History. Three recitations a week. Topics from pre-historic Britain to reign of Victoria. Individual work in biography and anecdotes. Books as bases; Montgomery's *Leading facts in English History*. Lingard's *English History*. Lancaster's *English History*. Guest's *Lectures on English History*. Special references to larger and specialized works.

2nd year.—Greek and Roman History. Four recitations per week. Greek first half-year: from pre-historic times through the Empire of Alexander. Text book: Pennell's *Ancient Greece*. As bases: Oman's *History of Greece*, Smith's *History of Greece*. Biographical work: Plutarch's *Lives of Great Men*. Roman second half-year: from founding of Rome to establishment of the Empire. Text book: Pennell's *Ancient Rome*. As bases: Leighton's *History of Rome*, Epochs of *Ancient History*, edited by Cox and Sankey. Special reference to Mommsen's *History of Rome*, Wilkins' *Primer of Roman Antiquities*, Plutarch's *Lives of Great Men*.

DEPARTMENT OF MEDIÆVAL AND MODERN HISTORY.

(Elective.)

Teacher,—SARAH W. LANE.

The aim of this division of the history department is not at all the gaining of new facts but rather of historic principles.

The Mediæval history, little influenced by great individuals, makes it possible to show how nearly history is a science and the development of historic theories results. The courses in modern history show the practical working of these preconceived theories in the steady development of modern constitutions.

Familiarity with recent history which has led to the present relations of modern nations is desired.

3d year.—3 recitations per week. Mediæval History Text book. Introduction to Mediæval History and Mediæval Europe, Emerton. The course is to show how continental countries were founded and developed into nations. Relations of state and church.

4th year.—2 recitations per week. Gardiner's Constitutional History of England, supplemented by Bright and Green. The development of the English Constitution from earliest time. Particular attention to formation of judicial and legislative bodies.

5th year.—2 recitations per week. Modern constitutional history of Continental Countries, England and United States.

1. The changes effected on Continent by French Revolution.

2. Parliamentary procedure in England to present day ; also social and economic reforms.

3. The formation of constitution of United States ; its interpretation, its expansion. History of political parties in United States.

THE DEPARTMENT OF NATURAL SCIENCE.

Teacher,—CHARLOTTE G. FRANKLIN.

1st year.—First half-year : Physics and Physiology required three hours a week, respectively. Second half-year Chemistry and Botany required three hours a week respectively. Aim : The general aim of this year's work is to teach the pupil

to observe quickly, to draw logical conclusions from her observations, and to express them clearly and concisely in note books.

2d year.—First half-year: Physiography, required three hours a week. Second half-year: Mineralogy, required three hours a week.

3d year.—A year of work in Biology six hours a week. In this grade, an elective may take the place of the science.

4th year.—A year of chemistry four hours a week. In this grade, the science may be omitted, when three foreign languages are elected in the college course.

5th year.—First half-year: Physics four times a week. Second half-year: Astronomy four times a week.

GENERAL AIM OF THE DEPARTMENT.

The scientific department seeks to develop patient, painstaking students, independent in observations, and in the conclusions drawn from them: to give them experience in manipulating apparatus, whenever practicable, and to train them in concise and accurate statement by the preparation of note books. As a final result of the course, the pupil should have a knowledge of the great laws that govern natural forces, and a delight in an intelligent appreciation of all natural phenomena.

DEPARTMENT OF MATHEMATICS.

Teacher,—SARAH W. LANE.

The mathematics department includes the studies of Algebra, Geometry, Solid Geometry. The first two years of work is required, the following years an elective may be substituted.

The aim of the work in mathematics is first to give careful training to the powers of observation by means of an elementary course in inventional geometry: later to develop the faculty for accurate and rapid work by drill in elementary algebra. Then

by united powers of observation and exactness we have made possible the keen reasoning necessary for original work in higher mathematics.

REQUIRED.

1st year.—4 recitations, intentional geometry, including elementary truths of the science, practical problems, constructive work. No text book used.

2d year.—3 recitations, elementary algebra, text book. Wells' Elementary Algebra, supplemented by McCurdy's Drill books and algebra blanks.

ELECTIVE.

3d year.—3 recitations, advanced algebra, text books, Wells' Algebra, Perrin's drill book. Algebraic formulas developed. Theoretical algebra through progressions and formation of equations.

4th year.—4 recitations, original work in geometry: Wells'; Wentworth Manual. Solid geometry: Wells, Chauvenet, or college preparatory work.

5th year.—4 recitations, trigonometry or mathematical reviews.

GERMAN.

(Elective: three recitations a week.)

Teacher,—MARY H. HOLMES.

AIM AND SCOPE.

The aim of the department is twofold :—to furnish the students with a thorough knowledge of the elements of German grammar and enable her to speak and write the language correctly, idiomatically, and as fluently as may be; and to introduce her to German literature, classic and modern, so that she may

pursue the study of this subject by herself after graduation. The memorizing of German lyrics is a part of each year's work throughout the course.

1st year.—3 hrs. per week. Pronunciation drill. Phonetics. Poetry. Grammar: declension and conjugation. Harris' German Lessons, I-XVII. or equivalent. Class-room conversation from beginning of course. Translation work in Reader.

2d year.—3 hrs. per week. Grammar: Through Harris, with general review, and accompanied by prose composition. Harris' Prose Composition, Sec. I and II. Short, idiomatic fairy tales or other simple stories read and related. Translation of Baumbach's "Im Zwielficht." Poetry.

3d year.—3 hrs. per week. Grammar: Joynes-Meissner more advanced grammar. Harris' Prose Composition, Sec. III and IV. Modern German read and made the basis of conversation. Stories by Heyse, Kleist, Auerbach, etc. Translation: Lessing's "Minna von Barnhelm." Poetry.

4th year.—3 hrs. per week. Advanced composition. Schiller: Life studied and discussed. Two or three dramas read and criticised with translation of selected passages. Selected poems learned.

5th year. 3 hrs. per week. Goethe: Life studied, with passages from autobiography. Three dramas critically studied: Gætz. Egmont. Ephigenia. Selected lyrics learned. Introduction to German philosophy: Herder's "Ideen zur Philosophie der Geschichte der Menschheit."

6th year. 3 hrs. per week. Introduction to modern German Literature: Representative modern dramas and novels studied and discussed. Poetry: Special study of Heine and Ruckert.

FRENCH.

(Elective: three recitations a week.)

Teacher.—KATHARINE WALKER.

Aim and scope of department.

1st year.—Pronunciation. Spelling. Vocabulary 1000 words. Translations: reading Alm's 1st Reader and Method. Elementary composition—Grammar oral.

2d year.—Pronunciation. Spelling. Translation. Reading Rollins' 1st Reader. Grammar oral. Nouns, adjectives, verbs, 1st conjugation, participles, elementary letter writing composition. Conversation.

3rd year.—Pronunciation. Spelling. Rollins' 1st reader. Translation Guerard's grammar to Syntax. Letter writing, composition, conversation.

4th year.—Pronunciation, spelling, Translation Guerard, Syntax, literature, conversation. Reading LaFontaine, Sans Famille, LaBelle Nivernaise, Le Roman d'un Jeune Homme Pauvre, L'Abbe Constantin.

5th year.—Grammar, literature, composition, Racine, Corneille.

6th year.—Special course, according to ability of pupils, in either old French or a literary course in modern French.

 LATIN.

(Elective.)

Teacher.—EDITH H. WILDER.

Aim and Scope of Department.

1st year.—Forms. Simple sentences and narrative in Latin and English.

2nd year.--Viri Romæ, Cæsar. Latin Composition based upon the text read. Sight reading.

3rd year.—Cæsar, continued. Cicero, Orations against Catiline, with Archias. Written and oral composition. One lesson a week in sight reading.

4th year. Sallust's Catiline. Selections from Ovid amounting to 2000 or 2500 lines. Three orations of Cicero, largely at sight. Latin composition continued.

5th year.—Four recitations a week. Six books of Virgil, Sight reading from Nepos with composition based upon that text. Study of Roman manners and customs. Grammatical review.

The work indicated above constitutes a thorough preparation in Latin for any of the colleges. In the case of students who do not intend to go to college, the reading outlined for the fourth year may be abridged, a part of Virgil studied then, and selections from Livy and Horace inserted in the fifth year. Throughout the course particular attention is given to the subject matter and literary style of the works read as well as to sentence structure and grammatical form. If desired, this literary and historical investigation will be continued, as graduate work, by a general course in Latin Literature and Roman Antiquities.

GREEK.

(Elective.)

Teacher,—EDITH H. WILDER.

The Department of Greek was not opened until this year; therefore, the first year's work is all that is represented in the school. The course will aim to give a thorough preparation for college and will follow substantially the outline given below:

1st year.—Four recitations a week. Beginner's work Forms, vocabulary and common constructions.

2nd year.—Four recitations a week. Xenophon. Greek Composition based upon the text read. Sight reading.

3rd year.—Four recitations a week. Homer. Herodotus. Sight reading. Composition based upon Attic prose. Grammatical review. Greek manners and customs.

BUSINESS COURSE.

Teacher,—CHARLOTTE J. BURGESS.

2nd year.—Stenography: Principles of Phonography. Book-keeping: Single and double entry. Business practice. Arithmetic: Commercial Arithmetic.

3rd year.—Stenography: Practice in writing and reading Phonography. Type-writing: Practice in copying English prose, business letters and statements.

4th year. Stenography: Speed practice in writing and reading notes. Type-writing: Same as above with writing from dictation.

5th year. Stenography: Speed practice in writing and reading notes. Type-writing: Practice in writing from Short-hand notes and from dictation.

NOTE: In all subjects accuracy, methodical habits and neatness are aimed for, rather than great speed and poor work,

NEWS OF THE DAY.

This subject is pursued during the school course, with one recitation a week.

What to read and how to read it are among the ends aimed at. A general knowledge of the world's doings is desired: discrimination in selecting important news is cultivated. No

“item” is read as class work; the subject must become the pupil’s own. This affords practice in good English expression.

Sometimes the lessons take the form of discussion.

The diplomatic relations of the United States, England, Germany, Russia, France, Italy, Spain, China, Japan, etc., are carefully followed.

Constitutional questions and the ethics of social questions are considered by the upper classes.

It is difficult to define this work precisely; it enters into every department of school-work; it gives a good knowledge of Geography and History; keeps in touch with the new literature and all the latest scientific research; it watches both American and Foreign affairs; it interests its students in the world of business and finance; in the religious world; the political and social world; in short, it produces in the students broader sympathy and wider intelligence.

GYMNASTICS.

(Required: two lessons a week.)

Teacher, HELEN L. BLACKWELL.

1st, 2nd and 3rd years. Preliminary work in Swedish Gymnastics, Free Exercise, Wands and Bells.

4th and 5th years. Advanced work in the above, with Club Swinging, Preparatory Fencing and Apparatus work.

Graduates. Still more advanced work in the above exercises, also Delsarte Movements and Drills.

The work in Physical Training aims to educate the physical faculties with the mental, to develop parts of the body undeveloped, to secure better control of nerve and muscle, to obtain a more correct carriage of the body, and seeks for general development and improvement throughout.

Measurements are taken at the beginning and at the end of the year, to ascertain the condition of the pupil and to mark any improvement.

DEPARTMENT OF ART.

Teacher—GEORGIANA C. LANE.

(Required: One Lesson a week.)

This subject is required of each pupil:—The study of art must necessarily be considered as a whole rather than the work of the different classes, for it is the prerogative of the instructor in that branch of study to arrange the course of drawing to meet the needs of the individual student and vary it to suit any special requirements.

The elements of art are given in such a way that pupils are prepared to continue their studies in higher schools with nothing to unlearn.

The general plan of the course of drawing is as follows:

Free hand drawing of objects and principles of perspective.

Study of form, light and shade.

Study of Historic ornament.

Study of Design, applied decoration.

Study of Color.

MUSIC.

(Required.)

Teacher, MAUDE E. RICE.

The aim of the work in music is to cultivate a taste for good music and to enable the girls to read readily and intelligently such music as they are likely to meet in chorus singing.

Although no special individual work is attempted, the girls incidentally receive considerable training in vocal culture.

Quality of tone is sought rather than volume.

The school sings together two half-hour periods a week. In addition to this each class has a forty minutes period once a week.

The work consists of choruses by the school, selected choruses, quartettes, trios and duets.

GRADUATION EXERCISES.

Of the Class of 1896.

PROGRAMME.

Chorus,—“Hark ! from the Woods,”	Abt.
Double Trio,—“The Moths,”	G. Palicott.
Chorus,—“The Grasshopper and the Ant,”	Moreau-Rees.
Address,---“The New Education for Women, and the Old-time Graces,”	

MERRILL E. GATES, LL. D.,

President of Amherst College.

Class Song.

Presentation of Diplomas, by Rev. Ellery Channing Butler,
Chairman of the Board of Directors.

CLASS SONG.

Written by Miss F. C. Lance.

CHORUS OF GRADUATES :

When silver stars of morning
First heralded the day,
They sang of love and learning
Along their shining way ;
They sang of hope and promise,
And a gladsome day to be,
For every heart that watching,
Its happy light should see.

CHORUS OF UNDERGRADUATES

Day of Joy, for them thou'rt passing,
 And thy dying hours they tell;
 School-mates, teachers, loving, learning,
 Bid they here a long farewell !

CHORUS OF GRADUATES :

Ah, Day is just beginning:
 The stars are chanting still;
 And hope and love, and learning
 Illume each waiting hill;
 We climb to meet their shining,
 At our feet the wide, wide world ;---
 The Day the stars have promised
 Has eternal light unfurled !

CHORUS OF UNDERGRADUATES :

Day of Life, they too sing ever ;
 In thy sunlight aye they dwell ;
 Time and Place may change, but never
 Shall they bid thy gifts farewell !

Report of School Committee.

To the Citizens of Quincy:—

With the completion of another year of school work, it becomes the duty of the School Board to lay before the inhabitants of the city a report of the progress made by the schools the past year, their present condition, and such views and recommendations as their present necessities seem to suggest.

It will be accepted by the citizens, and readily understood by them, that while the members of the School Board have a general knowledge of the condition and working of the schools, as individuals they cannot have that intimate knowledge possessed by the Superintendent; and to his report, therefore, we refer all whose interest in the public schools would avail itself of the best and fullest knowledge of their condition and needs.

In looking at the disadvantages which constantly attend them, it is to be presumed that all observers are agreed as to the greatest one which is the ever constant danger of losing some valuable teacher, as soon as his experience and capacity have caught the eye of some other municipality with a larger treasury, and a consequent ability to offer more than is in the power of your Committee to expend. We have by these (to us) unfortunate conditions lost many a valuable teacher, and it

is to be expected that the process will continue so long as Quincy is unable to pay the salaries offered by other and richer cities and towns. At the present rate of increase of school population compared to the increase of valuation, it is not believed that the average rate of salaries can be increased for some years to come.

But notwithstanding our constant losses, we believe we have a teaching force which, guided by the unceasing care and untiring zeal of our Superintendent, for conscientious devotion to its vocation, will not suffer in comparison with that of any other city or town in the Commonwealth. The Superintendent of Schools has, as in past years, received the heartiest of support from your Committee and we firmly believe has ably and conscientiously carried out his plans to the full satisfaction of all the Board.

The standard of excellence has been gradually lifted from year to year and rigorously maintained by the requirements demanded in the employment of teachers, and by the almost general good will which exists in all the relations between the different individuals concerned in the education of our children. To the citizens of Quincy is due in a large measure the credit for the high position which it takes in the cause of public school education.

A no small cause for congratulation at the present time is the establishment of two new school districts during the past year, one at Norfolk Downs and one at the Rail, and the near guard to the care of the water on Union street and appropriate completion of two new school buildings, in which the city may justly take pride. In one or more of the school districts there is today a growing want of more room and better accommodations for the constantly increasing numbers of little ones forming the first classes, and of better facilities for their proper care and protection.

It will soon be a question for the proper authorities to consider what to do to meet the demands of the future as well as the necessities of the present whether to remodel or rebuild.

The attention of the city is called to the fact that under the

Statute passed in 1894 it becomes imperative upon the Board to establish a manual training school in our city. Your Committee are heartily in sympathy with this branch of school work, and the city must in the near future comply with the requirements of the Statute. For facts and suggestions relating to this and other subjects financial and educational, we take pleasure in referring to the subjoined report of the Superintendent, which will be read with interest and profit.

Report of the Superin= tendent.

To the School Committee of Quincy:—

Your Superintendent herewith presents his fifth annual report for your consideration. This report is the twenty-second of those submitted by your Superintendents, and is the forty-seventh of those printed by the town or city.

This is the time of the year when in accordance with the rules and regulations of the Board, the Superintendent may in print present, as the agent of the Board, to the citizens of Quincy a synopsis of the work and the growth of the year and of the immediate needs of the schools. A brief summary of such a nature will be found in the following pages. Though some of the topics may not be of great moment, yet in later years, when it is desired to review a past decade, a running account of the doings of 1896 may be extremely helpful.

SCHOOL ACCOMMODATIONS.

It is with a feeling of great relief that teachers and pupils see the two new buildings approaching completion. The strain on the teaching corps due to extra work caused by excessive

numbers—to say nothing of the consequent unsanitary conditions of over-crowded rooms, has been very noticeable. This feeling of satisfaction would be more intense, if these two buildings could draw from the whole city; but it must be regretfully admitted that some rooms must seat more than their normal number. This means that this Board must continue its annual demand on the Council for more room; as the yearly growth in school attendance averages about 200.

By the readjustment of bounds the Massachusetts Fields school will open January 4, 1897, with more than 200 pupils. Then the Wollaston and the Quincy schools will have ample room for all save the lowest grade. To be sure, all the other grades will be so near their maximum, that in no distant future they must have further provision.

The Gridley Bryant will draw from the Willard school 275. The Willard, in turn, will receive 129 from the John Hancock and 31 from the Lincoln. The John Hancock will then take 58 from the Lincoln. By these transferences the last two schools will be able in April to accommodate the new children of school age. The Lincoln, however, cannot shelter within its own walls the sixth grade that has been housed in another district for two years.

If a four-room building were built on the land directly adjoining the Lincoln, and placed under the same principalship and janitorship as the Lincoln, then the Willard, John Hancock, and Lincoln, would be able to take care of the annual growth for several years.

If the city were to exercise the same foresight that characterizes the successful man of affairs, it would secure immediately suitable school lots at the foot of Penn's hill, and on Squantum street near Montclair.

The decision of the Committee of the Council on Public Buildings that no money should be spent on the Washington building for any extensive repairs, will meet with the hearty approval of the parents of that district. Lungs and eyes have suffered in the present building. If it seems best to build at the Point, the question of a new site must be

considered. The present location is not sufficiently central to accommodate the proper district. If it were further south and west, it would relieve the Adams and the Coddington. This district should enroll within its limits an average of 45 pupils to each of its eight teachers, or 360 instead of 290 pupils, as its proportional share of the total school population. Again, a modern building, like the two new houses, cannot be so placed on the present lot that the rooms may have a southern exposure. Even if the lot were sufficiently wide, the rear of the building would face Washington street. For these reasons a new site, possibly five hundred to one thousands feet south of the present house and in the vicinity of North street, is recommended.

It is possible that in April the south room on the first floor of the old High may be needed for the lower grades of the Adams and of the Coddington. The first and second grades of the two schools now number 275, and the average increase in April is 40. This will cause an average of 52 in each of the six rooms.

It is necessary that some explanation be given regarding the unsatisfactory condition of accommodations at Atlantic. The Quincy school building is on the extreme southern bound of the Atlantic district. From the Neponset bridge, Montclair and Squantum the pupils come. If the building were situated just north of the Music hall, then the parents who live in the section bounded by the steam and electric railroads, and Squantum street and Billings road would not consider the distance to the new building excessive, and the Quincy school, by the bounds first established by the School Board, would be relieved of twice as many as at present. As there will be in January at least 74 pupils, and in April 20 more, in the first grade, the overflow room in Music hall must be retained, or some other relief provided.

It is necessary that all these conditions and needs be thoroughly understood now, because it is a well known fact that in Quincy two years are always necessary for calling

attention to such matters, and for securing appropriations, plans, specifications, contract, and the building.

PROGRESS.

During the summer vacation the Committee of the Council on Public Buildings together with His Honor the Mayor, the Commissioner of Public Works, and your Superintendent, made a careful inspection of the five wooden schoolhouses for the purpose of studying the heating, ventilation and out-buildings. Although all are below the standard set by the Board of District Police, yet it seemed best to the Committee to concentrate their efforts on the Adams and the Quincy, and they so reported. These two buildings are sufficiently modern to warrant the outlay of several thousand dollars. The Coddington, Washington, and the older half of the Wollaston belong to a past generation. This is especially true of the Washington.

By the enterprise and energy of the Commissioner the decision of the Council, though made so late, was carried out before the opening of the autumn term September 8. Into the Adams the Fuller and Warren hot air and dry closet systems were introduced. This obliged the tearing down and rebuilding of parts of partitions between the nine rooms, the erection of two huge stacks, the removal of the old out-buildings and the construction of dry closets in the basement of the main building.

As the four furnaces in the Quincy were completely burned out, they were removed, and direct steam substituted. No ventilation was provided for the eight rooms or the corridors; but by incasing the iron smoke-stack of the boiler, with a brick stack, sufficient draft was obtained to permit the use of dry closets in the basement. Therefore closets like those in the High, Adams, Lincoln and the two new buildings were built. Both the Adams and the Quincy now need more light in the basements than the old-fashioned cellar windows can give.

The action of the Council recorded above is most gratify-

ing, especially if it is an indication of a definite policy for the future.

SCHOOL PROPERTY.

The Board of Assessors for the year 1896 have appraised the school buildings and lands as follows :

High . . .	\$75,000	Washington . . .	\$ 11,000
Old High . . .	9,000	Willard* . . .	125,000
Adams . . .	15,000	Wollaston . . .	36,000
Coddington . . .	20,000	Germantown, land	300
John Hancock . . .	45,000	Quincy Neck, “	300
Lincoln . . .	27,650	Massachusetts Fields land	2,000
Quincy . . .	19,700	Gridley Bryant, “	2,500

Total valuation of lands and buildings,	\$388,450
Approximate value of furniture, books, apparatus, etc.	15,000

Grand total \$403,450

*This includes the land on which the Hose House stands.

There is an apparent increase of \$2,000 due to the addition of this amount to the valuation of land at the “Rail” and at Norfolk Downs.

TEACHERS.

At the close of the schools in December there were in service :

	1895.		1896.	
	MEN	WOMEN	MEN	WOMEN
High School, Principal . . .	1	0	1	0
Other Teachers . . .	1	6	2	6
Grammar Schools, Principals	7	1	7	1
Other Teachers . . .	0	29	0	30
Primary Schools, Teachers	0	45	0	46
	<hr/>	<hr/>	<hr/>	<hr/>
	9	81	10	83

	9	81	10	83
* Assistants . . .	0	14	0	21
	—	—	—	—
	9	95	10	104
† Special Teachers . .	0	4	0	4
	—	—	—	—
	9	99	10	108

*This number fluctuates during the year. Generally from April to July the demand is the greatest. All the assistants are Quincy girls, and all, save two, are graduates of the High School. The number is unusually large at this time, because the children, who should have been in the Gridley Bryant and Massachusetts Fields Schools since last September, are crowded into other buildings.

Of the 93 regular teachers 71 have been in service the whole year. There have been 22 resignations during 1896. Boston tasted the quality of Quincy teachers at the very beginning of the year, and was so much pleased with the sample, that she has devoured whole mouthfuls since; or, to write in less figurative language, seven of our best teachers have been called to Boston. This number includes two experienced and valued principals. This loss is not, however, an "unmixed evil;" but it is a most excellent incentive to greater exertion and better work here. Quincy, even while she mourns her loss, congratulates Boston, and is sure, Dr. J. M. Rice to the contrary notwithstanding, that there are some good teachers in the capital city.

PUPILS.

	1894.	1895.	1896.
1. Whole number of different pupils. . . .	4,399	4,527	4,683
2. Average number belonging	3,418	3,635	3,788
3. Average number attending	3,272	3,481	3,680

4. Ratio of attendance to membership	95.7	95.7	95.2
5. Pro rata of tardiness to average membership	0.46	0.42	0.39
6. Pro rata of dismissal to average membership			0.89

CENSUS.

The population of Quincy in 1895 was	20,712
Estimated population for 1896 is	21,617
Number of families	4,373
Average size of families	4.74
Average size of families in the state	4.57

Number and average size of families by wards:

MONEY.

Valuation of Quincy, May, 1896,	\$17,580,515 00
Total tax levy,	317,612 96
Rate per thousand,	17 40

APPROPRIATIONS.

Salaries	\$62,235 00
Fuel*	5,500 00
Janitors	5,100 00
Transportation†	1,000 00
Books, Supplies, Sundries	8,200 00
Evening Schools‡	2,800 00
	<hr/>
	\$84,835 00

*A transfer of \$200 was made to Salaries.

†A transfer of \$58 was made to Janitors.

‡A transfer of \$50 was made to Books, Supplies and Sundries and of \$550 to Salaries.

It is worthy of record that no additional appropriations were asked of the Council although the Board based its budget on the expectation that the new schools would be ready in September. At that time special appropriations were to be requested of the Council and the number of assistants reduced.

SUMMARY OF EXPENDITURES.

	Expenditures	Balances
Salaries	\$62,909 96	\$75 04
Fuel	5,297 06	2 94
Janitors	5,158 00	00 00
Transportation	937 00	5 00
Books, Supplies, Sundries	8,247 92	2 08

	<hr/>	<hr/>
Total	\$84,746 39	\$88 61

See appendix for itemized accounts.

Charles F. Knowlton, Commissioner of Public Works, reports the following outlay for repair of school buildings :

High	\$154 41
Adams	72 40
Coddington	69 76
John Hancock	201 63
Lincoln,	412 74
Quincy	252 12
Washington	158 95
Willard,	885 10
Wollaston	484 72
<hr/>	
Total	\$2,691 83

These repairs and the appropriations for the same are not within the jurisdiction of the Board. The Superintendent reports to the Commissioner from day to day whatever needs his immediate attention and in June submits a written statement prepared by the Principals.

ADDITIONAL STATISTICS.

By the fifty-ninth annual report of the Board of Education, Quincy holds the following rank among the 353 towns and cities of the State and the 27 of the County.

Percentage of valuation appropriated to public schools : State, 187 ; County, 17.

Ratio of average attendance to the whole number of children between 5 and 15 years : State, 283 ; County, 22.

Comparative amount of money appropriated for each child between 5 and 15 years : State, 177 ; County, 20.

Table to show number of pupils in each grade and the loss from grade to grade :

	Dec. '92	Dec. '93	Oct. '94, †	Dec. '95	Dec. '96.
Grade I.	653	672	691	663	764
Grade II.	450	400	522	479	530
Grade III.	406	421	428	496	472
Grade IV.	393	402	428	399	478
Grade V.	361	370	383	441	409
Grade VI.	319	314	358	344	411
Grade VII.	253	291	302	302	329
Grade VIII.	214	227	251	260	245
Grade IX.	86	124	147	157	189
Grade X.	48	67	77	68	88
Grade XI.	30	33	46	50	36
Grade XII.	19	25	26	32	35

†Oct. '94 was taken because of reduced numbers in Nov. and Dec. due to diphtheria.

Grade IV. of '92 met with the following losses before it reached grade VIII. of '96—23, 12, 56 and 57, or a total loss of 148, about 38 per cent.

Grade V. of '92 had these losses :—47, 12, 42, and then 189 entered the High in '96.

Grade VI. of '92 has this record :—28, 40, 94, and 69.

Grade VII. of '92 :—26, 80, 79, and 32.

Grade VIII. of '92 :—90, 47, 27, and 15.

Grade IX. of '92 :—19, 21, 4, and graduated 31.

The loss of 148 by grade IV. of '92 is particularly unfortunate, because the pupils are generally only fourteen years old.

The whole number of pupils enrolled in September was 4,033, of these 373 were members of the High school. As there are twelve grades, and four of these are in the High, in the "ideally perfect system where every pupil enters the lowest and graduates from the highest grade", the highest enrollment in the High would be four-twelfths of the total, or 1,344. If the Quincy High is tested by this standard it will be evident that the High has an enrollment of nearly 28 per cent.

As for years it has been universally reported that 92 per cent. of the pupils in Massachusetts never go beyond the elementary schools, the attention of the public should be called to the fact that in Quincy the percentage in the High school, instead of being 8 per cent., is 28.

Furthermore, Quincy deserves greater credit, for she has nearly 200 pupils in other secondary schools. If this number were added to the total of the city, and also to the total of the High, the percentage seeking a higher education would be over 40.

HIGH SCHOOL.

Your Superintendent began his work in Quincy in September, 1890, as principal of the High school, For this reason the school has been dear to him, and it has received more of his attention than its proportionate share of his time. He feels now that its rapid growth in numbers, in facilities, in the interest of the public, and in general excellence, warrants him in asking the Head-master to speak for his school, his pupils, his fellow teachers, and himself. You are, therefore, requested to consider the following report:—

To H. W. Lull, Superintendent:—

DEAR SIR:—In accordance with your request, I beg leave to submit the following report of the High school.

The admission of two pupils to Harvard University, and of two others to Radcliffe College, marks an important point in the evolution of the new High school. The successful passing of examinations admittedly the most difficult of those required by any American University demonstrates satisfactorily the fact that the Quincy High school furnishes excellent preparation for any higher institution in the United States.

The following statistics about the Class of 1896 may be of interest:—

Graduates in the Classical and General Courses,	31
At Harvard University,	2
At Boston Normal School,	2
At Bridgewater Normal School,	1
At Normal Art School,	1
At Denver Normal School,	1
In Quincy Training Class,	16
Engaged in business,	3
Taking the Business Course,	1
Otherwise engaged,	4

Those pupils who received certificates in the Business department are, so far as is known, usefully employed. It is the unanimous testimony of students who have completed the Business Course that the commercial education received at the High school has been of great practical value to them. It would be well, however, for pupils who can afford the time, to take a year or two in addition to the two years of the Business Course, in order to gain a more liberal education.

Some well known schools have a business course extending over four years, and including not only the purely technical commercial studies, but a generous amount of modern languages, English literature, and elementary science. It must not be supposed for a moment, that the present two years' business course is in any sense an equivalent for the more liberal four years' course. Pupils who go into the close competition of our day without even an elementary knowledge of ancient or modern foreign languages, literature, science, and other important subjects, are making a serious mistake. Students whose time is limited ought to feel the absolute necessity of wide and constant reading supplementary to their more technical work.

The constantly increasing numbers at the High school suggest a problem to be solved at no distant day. Unless the school be divided, an addition to the building must be built soon. If it shall be deemed best to divide the school, the question will

arise at once: What shall be the basis of division? Probably the best solution of the problem will be found in a division of the institution into a Classical and General High School, and an English and Manual Training High school.

Although the number of teachers has been increased to ten representing Harvard, Dartmouth, Boston University, Bridgewater Normal, Framingham Normal, and other institutions, it is still altogether too small. For the first time in its history the school has two Sub-Masters. It is highly desirable to have both men and women in the corps of teachers. In connection with this subject the Head Master wishes to thank his able assistants for their conscientious, loyal, enthusiastic, and highly successful efforts. It is the opinion of the Head Master that the introduction of the custom of granting teachers a *sabbatical year for rest, recreation, and further study and research, would be followed by the happiest results. To visit Athens, Rome, Paris, Berlin and London, must be to the receptive and impressionable mind, an education in itself. The world must be forever more beautiful to one who has seen the Venus of Milo at the Louvre. Whatever moral, intellectual, and physical gains the true teacher secures by a sabbatical year, are also the gains of his pupils who consciously or unconsciously share them.

Among the important improvements of the last year should be mentioned the introduction of the study of German, and the advanced courses in other subjects preparatory to college. At some suitable time Mental and Moral Science, Political Economy, Elocution, and gymnastics, ought to be added to the course of study. Although Military drill has been a cause of friction in many cities, under suitable control it is undoubtedly of great benefit physically, mentally, and morally, to young men.

The most urgent need of the school is a library which is *absolutely indispensable*. Every study in the course would be

*NOTE.—By the usual terms of the "Sabbatical year" plan, teachers, in case they find themselves able to make use of the privilege, are granted one year's leave of absence for each seven years' period of service. A substitute is employed, whose salary is deducted from that of the regular teacher.

made more valuable by means of a working library. The work of decorating the walls of the school will, it is hoped, be continued. It is well to arrange the works of art in some systematic way. One meritorious plan provides for the grouping of photographs and casts in collections illustrative of the art of different nations. An Egyptian room, a Greek room, a Roman room, for example, might be easily arranged with excellent artistic results, and remarkably effective availability for the purposes of teaching.

The continued prosperity of the school paper, *The Golden-rod*, and of the Debating Society, afford causes for hearty congratulations. Although these elements of school life make necessary a large expenditure of energy and time, it has been found that those pupils who avail themselves of the opportunities afforded for writing and speaking receive most valuable training. The prize contests in English composition, translation from Greek, Latin, and French, and in Declamation have been continued with marked success. To avoid the possibility of wearying indulgent audiences, it has been deemed best to reduce the number of speakers to twelve. It is hardly fair to ask the teachers to train pupils for the Prize Contests in declamation, for the teachers' regular duties make serious demands upon their best energies. A teacher of elocution ought to be appointed to perform the exacting duty of training the contestants.

In accordance with the new method of celebrating graduation Colonel Henry A. Thomas, the acting Governor's Secretary, gave an able address to the graduates on "Success in Life and Good Citizenship." By the adoption of the modern commencement most of the graduating class are freed from an additional strain at a time of year when their strength is needed for a proper completion of their regular school work. If, however, by the omission of such parts as the prophecy, the history, the poem, and the statistics, it appears that those associations so important to the well being of a school are to any great degree impaired, it might be well to provide for a class day exercise entirely distinct from the ceremony of graduation.

The hearty co-operation of the parents with the teachers is

essential to the highest success of the pupils. Regular and prompt attendance, good conduct and scholarship, ought to be made by both parents and teachers the conditions of enjoying the inestimable privileges of education. Excuses should not be given for insufficient reasons. Every notice of a failure to reach the standard, whether in conduct, scholarship, or attendance, should be carefully read by the parents, signed, returned, and thoughtfully considered. Regular study hours at home every day are among the indispensable conditions of success at the High school. Frequent interviews of the parents with the Head Master and the other teachers will often result in great good to the pupils. It cannot be stated too often that solid and lasting acquirements are to be made only by prolonged, systematic, and well-directed industry. The solemn responsibilities of parents as well as those of teachers cannot be shifted. It is only when these responsibilities are deeply felt, that the value of parental influence reaches its maximum. The average child needs the sympathy, the interest, and the wise control of the parents, about almost countless details of the daily school life. When both parents and teachers unite in working together steadily for the child's welfare, there sets in a tide of influence that few pupils can resist.

Faithfully yours,

FREDERIC ALLISON TUPPEE,

Head Master.

EVENING COMMON SCHOOLS.

These schools are not so satisfactory as they should be to warrant the expenditure of so much money. This is not intended as a reflection on the teaching corps, since they do as well as can be expected under the conditions. Other towns and cities are having the same experience as Quincy. Irregularity of attendance is the great evil that nullifies the work of the teacher and prevents the pupil from advancing as he should. The average pupil does not attend because of "any thirst for knowledge."

To be able to become a naturalized citizen, to avoid conflict with the labor laws, to secure light, warmth, and shelter, to kill time, and often for no reason at all, two hundred will register; but the average attendance will be not more than 40 per cent. Worse still, the number included in this per cent. will change from night to night. A dance, variety entertainment, political rally, or even a neighborhood party will be a sufficient excuse for absence. There is no feeling of responsibility and no tangible, personal loss for non-attendance.

It is therefore recommended that in the future no member of the season 1896-97 shall be admitted in October, 1897, who failed to attend forty of the fifty lessons, unless he makes a deposit of one dollar. This dollar shall be returned at the end of the season 1897-98 provided he shall have attended forty of the fifty lessons. Removal from the city or proved illness shall be accepted as a satisfactory excuse from these conditions. Second: A member of this season who did attend forty nights, or a new member, shall be registered without such a deposit; but after two unexcused absences, he must deposit one dollar under the same conditions as above. As the school is in session only three nights per week (Monday, Wednesday and Friday) three nights are left for social matters, et cetera.

Other places have been driven to such a plan as is outlined here and report excellent results. Some, by the way, require a deposit from every one without regard to previous good attendance, but the plan seems less just than that proposed. The Evening Schools will still be free, as the State intended, for those who really wish to learn will find a way to be present 80 per cent. of the time, and will receive back their dollar at the end of the season.

In previous reports the statistics have been based on the closing term of one season and the opening of the following. This year the statistics relate to one school year from October, 1895, to March, 1896 and they are as follows:

Adams: Average attendance of men, 44.8; of women, 5: average number of teachers per night, 5.2. Number of sessions, 50.

Willard: Average attendance of men, 43.6; of women, 9.2.
Average number of teachers, 5.3. Number of sessions,
50.

EVENING DRAWING SCHOOL.

During the summer vacation all the furniture and apparatus of this school were removed from the third floor of the new High to the lower floor of the old High. As the majority of the members of the evening classes come from wards three and four, the present accommodations are far more central than they have been for the last two years.

The attendance has decreased during these years for a reason other than the distance. The excellent courses offered by the Y. M. C. Association have attracted about half of our usual number of pupils, whereas before these courses there was only one opportunity of securing instruction in mechanical and free hand drawing in the whole city.

W. A. England, who since November, 1889, has taught this school, resigned in October, and Charles C. Bryant, a citizen of Quincy, a former student of the Cowles Art School, and active member of the Boston Art Club, is his successor.

The statistics for the school year (October 28, 1895 to Feb. 28, 1896) are as follows:

Average number men attending Mechanical class (48 lessons)
14.3.

Average number men in Free-hand (49 lessons), 4.73; of
women 3.08.

One-year certificates Mechanical, 8; Free-hand, 6.

Two-year diplomas Mechanical, 2; Free-hand, 1.

The school opened Oct. 5, and has enrolled 32 pupils. The Mechanical class have been studying orthographical projection from models, practical examples of building construction from sketches as applied to stone work and carpentry. The free-hand class has drawn from models; geometrical solids, natural and conventional ornament, and casts from the antique.

GRAMMAR SCHOOL GRADUATION.

This Board was fortunate in securing Miss Sarah L. Arnold, Supervisor, Boston, to give the address at the graduating exercises of the Grammar Schools. Both parents and pupils were delighted with Miss Arnold's practical, intensely interesting, and sympathetic talk. The 256 graduates of the eight schools furnished the six vocal selections, but took no other part in the exercises. As these six choruses had been learned as part of the regular work in music during the second half of the school year, the present method of graduation in no way interfered with the regular daily work.

The exercises were opened by your Superintendent who urged upon the pupils the necessity of securing the highest and broadest possible education. He called the attention of the graduates and their parents to the many advantages offered in the High school where they were then assembled. After the Superintendent, His Honor, Charles Francis Adams, 2d, Mayor of Quincy, extended his greetings and congratulations. The diplomas, after introductory remarks by the Chairman of the Board, were presented by the special sub-committee of each school as follows:

Adams,	42	Quincy,	32
Coddington,	35	Washington,	22
John Hancock,	24	Willard,	42
Lincoln,	25	Wollaston,	34

For programme see appendix.

GENERAL MEETINGS AND WORK.

- February. John T. Prince, Agent State Board of Education.
 March. J. S. Cooley, Representing Silver, Burdett & Co.'s
 Vertical Writing System.
 March. H. W. Lull, Superintendent.
 March. Marshall L. Perrin, Boston University.
 April. Henry T. Bailey, Agent State Board of Education.
 April. Walter Scott Parker, Supervisor, Boston.
 September. H. W. Lull, Superintendent.

These meetings, together with those of the Quincy Teachers' Association have been entirely voluntary, and therefore, the large attendance has been particularly pleasing.

The Grammar masters have a club that meets in the office of the Superintendent on the third Thursday evening of each month to discuss all matters relating to their work.

In addition to the reading of educational magazines and periodicals and also the standard magazines of the day, 78 of our teaching corps have reported that during 1896 they have devoted themselves to courses of professional reading, to private or class lessons on general subjects, to lectures, to attendance at summer schools, or to some other work which indicates an expansion and growth that must increase their value as teachers. A long list of pedagogical books has been returned as read, modern languages have been begun or reviewed, lessons in music, drawing, sloyd, and geography have been taken, lectures on literary and historical subjects attended, and all these at a considerable individual expense. When we remember that our average salary is so small, that even minor expenses must be carefully scrutinized by the teachers, they certainly deserve the congratulations and the thanks of the community.

To be more explicit, it may be of interest to know that 28 have done professional reading, 25 have attended lecture courses, 22 have taken private or class lessons, and three have been students of the summer courses at Harvard.

Furthermore, several of the teachers have taken their classes to Boston, and with them visited many scenes of historical interest, important buildings, museums, and other places of educational value. Means of transportation for those who could not otherwise go, have been provided through the influence of the teachers. When we remember that we are at the very door of Boston, these excursions may seem unnecessary, but it is a fact that a large number, even in the highest grammar grades, have no personal knowledge of the city beyond a familiarity with a few stores.

During the year three of the Principals have added, by means of money obtained by public entertainments, to the

resources of their building. These additions are books, pictures or busts. As this method has taken none of the time of the pupils in school hours and has required nothing of them outside, save the selling of a few tickets, it in no way detracts from their regular school work; but, on the other hand, it tends to increase their interest and also that of their parents.

MASSACHUSETTS FIELDS.

“In the northern portion of Quincy, near Squantum, there was a region known from time immemorial as the ‘Farms District.’ It was a broad plain some distance south of the Neponset, and lying between the bay front and the swamps through which the line of the Old Colony Railroad was run. In all Massachusetts there was no site of greater historical interest than this, for from it the Commonwealth may, in some sense, be said to have derived its name. Writing in 1633, William Woods said of it, ‘This place is called Massachusetts Fields, where the greatest Sagamore in the country lived, before the plague, who caused it to be cleared for himself.’ Accordingly it was to this point that Miles Standish and his fellow explorers from Plymouth directed their course when, on the 29th of September, 1621, they made their first visit to the country of the Massachusetts. It was the central gathering place—at once the play field and the muster-ground of that ‘goodly, strong, and well-proportioned people’ whom the redoubtable Captain John Smith described as being ‘very kind, but in their fury no less valiant’.”—*Charles Francis Adams.*

On this historical spot—“the spot which was to the Massachusetts what the Isthmian Fields were to the Greeks” has been erected a nine-room school room building in which Quincy may justly take great pride. To perpetuate the historic associations just referred to, the name Massachusetts Fields has been cut in polished granite, and the tablet has been affixed to the front wall of the building.

GRIDLEY BRYANT.

“On June 17, 1825, the corner stone of Bunker Hill Monument had been laid by Lafayette. The occasion was a memorable one, and among those who took part in it, was Gridley Bryant, a builder by trade, but also a self-educated engineer. Born in Scituate in 1789, Bryant was at this time thirty-six years old; and in the ceremony of laying the corner-stone, he officiated as master-builder. A man of the George Stephenson type, inventive, energetic, and full of resource,—Bryant had read accounts of what was then going on in England, and be-thought himself how he could turn it to use in the work he had in hand here.”

“That work was the building of the monument; and long after its completion he thus told his own story: ‘I had purchased a stone quarry for the express purpose of procuring the granite for constructing this monument. This quarry was in Quincy, nearly four miles from water-carriage. This suggested to me the idea of a railroad. Accordingly, in the fall of 1825 I consulted gentlemen of Boston regarding it. They thought the project visionary and chimerical; but, being anxious to aid the Bunker Hill monument, consented that I might see what could be done. I awaited the meeting of our Legislature, and after every delay and obstruction that could be thrown in the way, I finally obtained a charter. Unfavorable as the charter was, it was admitted that it was obtained by my exertions. I surveyed several routes from the Bunker Hill quarry to the nearest tide-water; and finally the present location was decided upon. On the seventh day of October, 1826, the first train passed over the whole length of the road.’”

“At the time, Bryant’s work excited an almost unequalled interest throughout the country, and it is still mentioned in every school history of the United States as the commencement of an epoch. The really memorable thing about the railroad for horse-power was his ingenuity in devising the appliances necessary to its successful operation.* Bryant died quite poor in 1867.”—*Memorial History of Boston*.

*The road was four miles in length, including branches and cost \$50,000.

Near the scene of Gridley Bryant's labor the companion building of the Massachusetts Fields has been erected. Charles Francis Adams writes in his *Three Episodes*:—"There were two problems still unsolved: one related to hauling and dressing the rock; the other to its carriage. Both of these problems Solomon Willard and Gridley Bryant solved. While Willard laid open the quarry and devised the drills, the derricks, and the shops, Bryant was building a railway."

As Quincy had already shown her appreciation of Solomon Willard by naming the huge school building, erected in 1891-92 in the very centre of his life work, the Willard, what could be more appropriate than calling this later addition the Gridley Bryant?

Because of these intensely interesting historical associations, it has seemed best to incorporate these brief sketches here that the citizens may recall and glory in the achievements of other days. However true it may be that "A prophet is not without honor, save in his own country, and in his own house;" it is certainly true that it is not "the stranger within our gates" who knows the least about Quincy.

The two new houses have been built from the same plans and specifications, and with the exception of the heating apparatus, are identical. In each case, however, the heating is by both direct and indirect steam, and therefore the apparatus differs in each only in minor details. The dry-closet and the ventilating systems have been successfully tried in Quincy. In fine, the buildings received the written approval of the State Board.

If the comparatively small amount of money paid for these houses, is kept in mind, their solidity, beauty, convenience and general utility are remarkable and reflect great credit on the executive department that delivered them to this Board.

The cuts of the first and second floors herewith submitted will show the general plans.* Each building contains nine schoolrooms besides the teachers' room and the principal's office. The average seating capacity of each room is 50 and therefore each building will accommodate 450 without crowd-

*See Appendix for floor plans.

ing. The pupils' chairs and desks are adjustable. As many parents have no opportunity of knowing or seeing the advantages of this improved furniture, it may be well to say that not only do children vary widely in age and size ; but also in proportional development of trunk and limbs as regards length, and in body as regards girth. To meet these wide divergencies the desk is so constructed that it can be raised or lowered, and the chair has, in addition to these changes, a forward or backward movement and, if the teacher so desires, a half turn to the right or left. In the close competition, this furniture was secured at only a nominal advance on the cost of non-adjustable.

The citizens of the two districts have presented the schools with flags.

MISCELLANEOUS.

On all sides there are radical new departures, an epidemic of change, and a trial of new methods, devices and theories. The temptation, therefore, is great to "go and do likewise." In spite, however, of the risk of being charged with physical paralysis or mental apathy (perhaps atrophy), novelties and fads have been left for experimentation to richer municipalities, while the effort here has been to strengthen the old lines of work. A course of only eight years below the High school demands that every minute be utilized.

To this end, the course in arithmetic has been carefully revised and concentrated, so that the advanced work may be completed as early as February of the eighth year. An entirely new course in language for the eight grades has been prepared and printed, and a new text book, selected after thorough examination and the unanimous approval of all the principals, has been adopted for the eighth grade.

The work in music has been so changed in the lowest grade that less technical matter is taught, while the number of sweet, joyous and instructive note songs has been increased. By this plan it is hoped that a greater love of music will be inspired and the time given to it will be more restful to the little ones.

This year it has been possible to give the senior class of the High school individual work in cooking. By making use of one section of the chemical laboratory Mrs. Wade, at a slight extra expense, has been able to accommodate all who are willing to remain one afternoon per week. The time required to prepare and cook the articles in the schedule was so long, that it could not be taken from the regular school hours. Nearly all the young ladies of the class of '96 volunteered, promised constant attendance, and completed the course.

The plan, adopted last year, of having a teacher of drawing to take entire charge of this branch in the High school during two days of each week and then for the three remaining days supervise this subject in all the lower grades, has been continued. It is a good business principle to have one responsible head, so that there may be no break in the continuity of the work, and unsatisfactory results in the highest grades may be traced to lower and then corrected.

The work in sewing has been as thorough and satisfactory as in the past. As only one teacher is obliged to deal with 36 classes in eight different sections of the city, it is no easy matter so to combine and schedule the work that each class may have one lesson per week. After January of 1897 there will be 43 classes and combinations must be made to secure the weekly lesson.

In September, 1890 Miss S. E. Brassill came to Quincy to originate a course of work in Elementary Science for the first eight grades. As has been the case in music, drawing and sewing, the work in all the grades at first had to be quite similar, for there was nothing on which to build. The second year, however, the work began to be graded, and now it is sharply defined. While Miss Brassill was developing the present course, she attracted the attention of educators throughout the state, and no woman in Massachusetts has been in greater demand for lectures, institutes, and class instruction. Last June Miss Brassill resigned to make more extended study in her chosen department, and to be free to answer the constant demands for assistance.

Miss H. Annie Kennedy, her fellow worker for two years in Quincy, a graduate of the Bridgewater Normal School, and a special student of science courses at the Massachusetts Institute of Technology, and at Harvard, is her successor. This appointment permitted a very desirable change. Only three days of Miss Brassill's time could be secured, but by engaging Miss Kennedy for the whole week, it is possible to make the High school the headquarters of the department, and from it to reach down to the lower grades. Miss Kennedy is now teaching three periods per day in the High, and supervising afternoons the work of the eight grades. The plan for the future is to join the nature work and the geography so intimately, that they may be mutually helpful, and then to reduce the time of Miss Kennedy's *direct* supervision. It is very desirable that teachers' classes be formed for advanced work in biology, and this reduction will make them possible. The constant change in the corps of teachers will retard the execution of this plan, but it is to be hoped that the high and normal schools by a more thorough preparation will help to remedy this trouble.

By vote of this Board the system of vertical writing published by Silver, Burdett & Co. was introduced last April into the first three grades. In September the former third had become the new fourth, and since that time four grades have been writing the full, round, vertical hand. The results have been just what the system promised, and are decidedly satisfactory. The teachers, as well as the pupils, have improved—particularly in their board work. The script and the figures are so distinct that the strain on the eyes of the pupils, as they read from the board, is lessened. The teachers also have the same experience when correcting the numerous written exercises.

Quincy has always had excellent writing from a fair proportion of every class; but there was always a hopeless minority. This minority will never produce a copy that will have any æsthetic qualities; but in the future it can be easily read. The general success has been so pleasing that teachers of the higher grades are asking that they, too, may adopt the vertical system.

CONCLUSION.

First: It is a matter of regret that some parents are so willing to impute wrong motives to conscientious teachers who believe that children should be taught the seven school virtues (regularity, punctuality, neatness, accuracy, silence, industry and obedience) and that they should be obliged to improve the few short years of their school life. Less conscientious teachers would overlook much, would neglect much, would permit the indifferent children to "mark time" and thus would escape much friction with the parents—that friction which makes a teacher's life a burden.

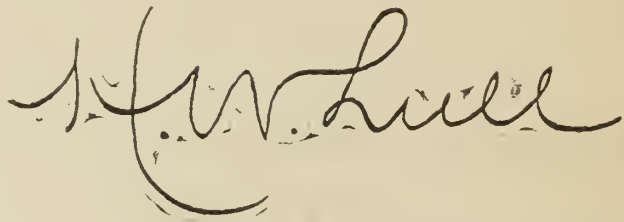

It goes without saying that our teachers have too much to do to seek for trouble. When ridiculous stories are reported at home by the children, an interview should be sought at once with the teacher in the presence of the child and the true status of the matter learned. Unfortunately, there are many abusive remarks and suggestions of insubordination on the part of adults and a prevalent idea that a teacher is a common servant, subject to the petty abuse and correction of any citizen. The true and faithful teacher should command and receive the same respect that a member of any other profession receives who labors for the welfare of mankind.

Second: Of the many and varied duties of the Superintendent one of the most unpleasant is the responsibility for giving the storm signal. The distance from the school, the condition of the road, the lack of shelter, the supply of umbrellas, over-shoes and suitable outergarments, and the difference of opinion among parents as to the exposure of their children, vary so widely, that it is utterly impossible to please all. Furthermore, the possibilities of New England weather are so unfathomable, that "Old Prob" himself is often a false prophet. The lot of the whistle-blower, hampered by all these conditions, is not a happy one.

Third: In spite of the fact that the teachers have been in so many cases over-worked because of the large number of pupils, yet they have almost without exception far outreached

“the letter of their obligations.” They have given your Superintendent their cordial support and co-operation, and their intelligence, zeal and loyalty have made possible whatever success and progress may be credited to 1896.

With the heartiest thanks to all the members of this Board for their encouragement, assistance, advice and confidence, this report is respectfully submitted by

A handwritten signature in cursive script, reading "H. W. Hull". The signature is written in dark ink and is positioned above the title "Superintendent of Schools".

HON. CHARLES H. PORTER.

Music—"To Thee, O Country,"

Julius Eichberg

BY THE SCHOOL.

Class Colors,—Crimson and White.

Class Motto:—*Sola Nobilitas Virtus*

CLASS ODE.

I.

The winged moments fly,
Long years have passed for aye,
While tossing on the stream,
Our bark has sped its way
And now where drooping skies
The restless sea enfold,
What thoughts of future stir?
What memories wake of old?

II.

Far o'er the pathless deep
 A mist its veil has drawn ;
 See we the falling shades,
 Or glimmers dusky dawn
 Of other years in view,
 That wait to add their store
 Of memories sweet and long
 To happy times of yore ?

III.

May ever, faithful ship,
 The wisdom gained with you,
 As once it led us all,
 Now guide us each anew ;
 The breeze on rippling wave,
 The storm in foamy sky,
 Shall both proclaim your praise.
 Well earned in days gone by.

IV.

Alas 'tis time to haste,
 The moments e'en are heard
 When we too soon must say
 Our last sad sundering word,
 The faltering strains that now
 Our inmost hearts compel,—
 Hence ever on, good guide,
 Farewell—a last farewell !

—CHARLES J. ANDERSON.

BUSINESS COURSE.

6.—An Original Story or Poem.

7.—“Fads” wise and foolish.

8.—The Abigail Adams Cairn.

TRANSLATIONS.

Virgil,—Æneid, Book VI, 485-540.

Cicero,—Oration for Marcellus, Chapters III and IV.

Cæsar,—Commentaries, Book VII, Chapters XII and XIII.

Xenophon,—Anabasis, Book IV, Chapters 8, §22-§28 (inclusive.)

FRENCH,—CLASS OF 1897.

1897¹ “*Le Clos-Pommier*,” Chapter VII, page 74, as far as “*Parome fit si bien*,” page 79.

FRENCH,—CLASS OF 1897².

“*La Petite Fadette*,” Chapter X, page 56 as far as Chapter XI, page 63.

FRENCH,—CLASS OF 1898.

“*Le Roi Des Montagnes*,” Chapter V. “*Les Gendarmes*,” page 147 as far as “*La dessus*,” page 152.

GENERAL STATEMENT.

1.—The date of the Prize Speaking and announcement of essay and translation prizes will be Friday, 30 April, 1897.

2.—Essays and translations must be signed with an assumed name.

3.—Together with each translation and essay there must be

handed in a sealed envelope containing: (a) Both the assumed name and the real name of the pupil. (b) A statement to this effect: The essay or translation offered by —— (pupil's name) is my own unaided work.

4.—On the envelope write the assumed name of the pupil, and the year of the class.

5.—Use examination paper. Write on only one side of the paper. Neatness, spelling and penmanship, should be kept constantly in mind. Clear, vigorous and idiomatic English is always acceptable to the judges.

6.—All essays and all translations must be handed to the Head Master, Mr. F. A. Tupper, on or before the first Monday of the Spring term.

THE ASSOCIATION OF THE ALUMNI OF THE QUINCY HIGH SCHOOL.

President,—Mr. H. W. Battison, '85.

Vice Presidents,—Mr. F. F. Prescott, '77 ; Mr. A. L. Litchfield, '72 ; Mrs. M. T. Gavin, '66.

Secretary,—Mr. Percival A. Hall, '87.

Treasurer,—Mr. C. E. Pierce, '90.

Executive Committee, with above,—Miss Lucy L. Hayes, '89 ; Miss Mabel Adams, '82 ; Mrs. F. R. Ilsley, '78 ; Miss Burns, '96.

Object : To promote the usefulness of the Quincy High School, to furnish opportunity for friendly intercourse among its Alumni, and to create and preserve harmonious relations between the school and the community in which it is placed.

Members : All those who hold diplomas of graduation ; all those persons who previous to the first annual distribution of diplomas had completed a full course of study in the Quincy High School and who can produce evidence thereof.

Honorary Members : Superintendents of Schools and all persons who are and who have been teachers in the Quincy High School. Other Honorary Members may be elected by ballot.

THE QUINCY TEACHERS' ASSOCIATION.

OFFICERS FOR 1896—97.

Thos. B. Pollard, Washington, President.
 Eliza C. Sheahan, Adams, Vice President.
 Frances C. Lance, Woodward Inst., Secretary and Treasurer.

EXECUTIVE COMMITTEE.

J. M. Nowland, Adams, Chairman.
 Frances Forsaith, Coddington, Secretary.
 Frederic A. Tupper, High.
 Robert S. Atkins, John Hancock.
 Helen F. Boyd, Lincoln.
 Evelyn G. McGinley, Quincy.
 Thos B. Pollard, Washington.
 Mary L. Conway, Willard.
 Annie D. Marden, Wollaston.
 Edith H. Wilder, Woodward Institute.
 John O. Hall, Jr., Adams Academy.

Plan of Work:—

The first meeting of the Association for the current year was held October 22d. It consisted of a short business meeting followed by a sociable. The sixth and last meeting will be similar to the first.

In view of the present responsibilities of the individual teacher, it was deemed expedient to change the plan of work for the other meetings of the year, in order to remove the burden added by the previous demands of the Association. Therefore, lectures by different local celebrities are planned for the second, third, and fourth meetings. The nature of the fifth meeting is as yet undecided.

FRANCES C. LANCE,
 Sec'y Q. T. A.

To H. W. Lull, Supt. of Schools, Quincy.

PRESENTATION OF DIPLOMAS, TO THE GRADU-
ATES OF THE GRAMMAR SCHOOLS, THURS-

FLOOR PLANS OF NEW SCHOOL BUILDINGS.

DESIGN OF NEW SCHOOL BUILDINGS ERECTED IN 1896.

NEW BOUNDS.

GRIDLEY BRYANT DISTRICT.

The district shall include all that part of Quincy north and west of a line beginning at the Quincy and Milton boundary stone on Beale street, near Milton street, and running thence in a southerly direction in the rear of all houses on Summit avenue, to the intersection of Furnace brook and Adams street on the easterly side of said street; thence following up the course of Furnace brook to the public playground; thence in a southwesterly direction through the said ground and in the rear of all houses on Hall place to Copeland street; thence across the tracks of the N. Y., N. H. & H. R. R. at the intersection of Copeland and Willard streets, and thence in a southwesterly direction to the Milton line.

WILLARD DISTRICT.

The district shall be bounded by the Gridley Bryant line on the north and west to the intersection of Furnace brook and Adams street, on the easterly side of said street; thence the line shall run down Furnace brook to a point opposite the junction of Adams and Whitwell streets; thence through the centre of Whitwell street to Ryden street; thence through the centre of Ryden street in a direct line to Quarry street, at its junction with the extension of Smith street; thence through the centre of Smith street to Garfield street; thence through the centre of Garfield street to Granite street, thence through the centre of Granite street to Centre street; thence by the ward line to the N. Y., N. H. & H. R. R., and thence southeasterly by said railroad to the Braintree line.

MASSACHUSETTS FIELDS DISTRICT.

The line shall begin at the N. Y., N. H. & H. R. R., and

run thence easterly through the centre of Billings road to Hancock street; thence through the centre of Hancock street to Glover avenue; thence easterly through the centre of Glover avenue in a direct line to Quincy bay; thence by the shore line to Merrymount park; thence by boundary of park to the southwest entrance on Hancock street; thence across Hancock street to the rear of houses on the westerly side of Hancock street; thence northerly in the rear of said houses to the rear of houses on the northerly side of Standish avenue; thence in rear of these houses to Beale street; thence through centre of Beale street to the N. Y., N. H. & H. R. R.; and thence northerly on said railroad to starting point.

JOHN HANCOCK DISTRICT.

The district shall have the easterly bounds of the Willard district on the west and the northerly of the Lincoln, on the south. From the Adams school district the John Hancock shall be divided as follows: Beginning at the intersection of Quincy street and the N. Y., N. H. & H. R. R., the line shall run northerly to Water street; thence through the centre of Water street to Pleasant street; thence through the centre of Pleasant street to Fort street; thence through the centre of Fort street to Granite street; thence through the centre of Granite street to Gass place; thence through the centre of Gass place to Deldorf street; thence through the centre of Deldorf street to Whitwell street; thence through the centre of Whitwell street to Ryden street.

LINCOLN DISTRICT.

The district shall include all that part of Quincy between the main line and the West Quincy branch of the N. Y., N. H. & H. R. R., and south of a line beginning at the intersection of the ward line and the West Quincy branch and running thence easterly along said ward line to the junction of Centre and

Granite streets ; thence in a direct line to the junction of Intervale street and Brooks road, and in the rear of all houses on Nightingale avenue ; thence through the centre of Brooks road to Liberty street ; thence easterly on Liberty street to Quincy street ; thence through the centre of Quincy street to main line of railroad.
